Chris et al:
In addition to the comments (2nd attachment) I emailed Chris and Virgil on 3/4/16, I had another thought about the language in the draft report concerning onsite sewage systems. The information in Section 4.6 (Onsite Wastewater Disposal/Septic Systems) does not provide a detailed discussion about phosphorus considerations, and I recommend you embed the below web link into the document so readers can visit the site for more information if interested. I passed the article on to Chris back in September 2013 (1st attachment).

Subject: Nonpoint Source Phosphorus Workgroup Draft report - PA #12-155

I have attached the final draft of the PA #12-155 Nonpoint Source Phosphorus Workgroup Draft Report - to present to the Workgroup members. We would like to receive comments back from workgroup members within two weeks, so that the report can be finalized and combined with the other workgroup reports, for the Coordinating Committee's use, in reporting back to the Legislature.

Please take a look and email comments back to me by March 4, 2016 with a cc to Virgil Lloyd, our co-chair at vlloyd@fando.com . You can mail paper comments back to me at the mailing address below if you prefer.

Let me know if you are interested in holding a workgroup meeting to discuss comments. If the response is positive, a meeting will be scheduled by a doodle poll.

Thank you all for contributing your time and submissions.

I have also included the Table **5.2.1 Removal Efficiency, Capital Costs, Maintenance Costs, Type, and Frequency, and Cost Effectiveness for Urban Stormwater Best Management Practices (BMPs)** from Appendix 2, pages 61-63 of the document in MS Word Format. I had trouble printing those three pages on 11 x 17" paper in the PDF version.

Feel free to call me with any questions or concerns, or if you need special accommodations of any kind.

Chris
