

**VENDOR NAME:** AT&T Corporation

**SERVICE/PRODUCT NAME:** Long Distance Service: InterLATA Long Distance: SDN OneNet

**SERVICE/PRODUCT DESCRIPTION:**

AT&T OneNet® Service is a bundled offer that offers a robust set of Service Capabilities, including Long Distance, Local and Access Service Capabilities.

- SDN OneNet Service provides Outbound Long Distance Calling Capabilities for calls originating at a Customer Site in the US Mainland, Hawaii, Puerto Rico, or the US Virgin Islands using dedicated access facilities or a switched access line. Global Software Defined Network Service provides Outbound Long Distance Calling Capabilities for calls made from the United States using dedicated access facilities.

SDN OneNet Service provides Outbound Long Distance Direct Dial calls, which are long distance calls dialed by the calling party without using an AT&T operator or automated call processing system. Outbound Long Distance Direct Dial calls are billed to the customer of the originating telephone number.

Customer must obtain access between the Customer Site at which the calls will originate (for outbound calling) or terminate (for inbound calling) and the AT&T POP. Such access may be a dedicated access facility or a switched access line for which AT&T is the preferred long distance provider. The interface of a dedicated access facility at the AT&T POP must be at a speed of 1.544 Mbps (multiplexing may be used to connect non-1.544 Mbps facilities).

**SERVICE LEVELS:**

AT&T does not offer SLAs for Outbound Long Distance. We do consistently achieve a network with availability of 99.99%, 24 hours a day, 365 days per year. AT&T network reaches over 250 countries and territories and uses fiber optic cable for 98% of calls and circuits. AT&T handles over three million voice, data, and video calls every business day. Digital routers handle all switched traffic, and total circuits cover three billion miles.

**SERVICE AVAILABILITY/LIMITATIONS:**

None.
