What is a bed bug?
- Two species of bed bugs feed on humans
  Common bed bug *Cimex lectularius* L.
  Tropical bed bug *Cimex hemipterus* Fabr.
- Blood feeders on humans and pets
- Adults are apple seed in size, nymphs and eggs are much smaller
- Brown colored, flat, oval, with six legs and two antennae. They do not fly (no wings) or jump
- They feed at night and hide by day
- Development 5 to 8 weeks from egg to adult

Do you have bed bugs?
- Unexplained, often itchy red spots appearing on skin usually in rows or clusters (skin reactions may be more severe). Drugs, medical, mental conditions, and allergies may mimic insect feeding
- Look for scattered brown spots on bed linen and/or mattress seams, or favorite seats
- Look for small oval brown insects on beds or chairs
- Get expert to identify insects if found; carpet beetles, fleas, ticks, and small cockroaches can be mistaken for bed bugs

What to do if you have bed bugs
- Don’t panic; feelings of violation, disgust and stigma are common
- If bed bugs are confirmed, tenants should notify landlords; property owners should contact pest control professionals with experience. Delays in treatment can make control harder
  Self treatments don’t work
- Cooperate with your service professional. This may mean cleaning (clutter) ahead of treatment
- Educate yourself. Be careful surfing the web. University (“edu”) and government sites are preferable, because information has been reviewed

Bed protection during infestation
- Move bed 4”-6” away from wall
- Put bed feet into insect interceptors or wrap legs with packing tape, sticky side out
- Put mattress and box spring in encasements
- Vacuum cracks of bed (not a perfect remedy, but it will offer some relief)
- Wash linen, remake bed; have nothing touch the floor

Identifying bed bugs
- Photos enlarged, not actual size
  Bed bugs with a pin
  Female (left), male (right)
  Nymphs
  Bed bug (top) carpet beetle larva (bottom)

Correct identification is important

Precventing bed bugs
- Bed bugs may be found on:
  - Discarded furniture, beds, appliances or other abandoned articles. *Never* bring home items found on the street
  - Purchased used furniture, TV’s, linens, clothes, boxes etc.
  - Items from self-storage facilities
  - Rental furniture
  - Items carried by rental, moving or delivery trucks
  - Belongings of visitors, friends, or family members who have traveled or stayed in long-term care, hostels, universities, colleges, cruise ships etc.
  - Used gifted items from friends or family
  - Also, self infesting by bed bugs themselves, moving from room to room, apartment to apartment

Travel precautions
- When you travel:
  - Select hot drier and wash tolerant travel clothes
  - Use hard smooth luggage over fabric luggage
  - Pack plastic bags to seal purchases and/or items that may have become infested
  - At destination, inspect bed area for bed bug signs on headboards, mattress seams, adjacent furniture, and objects near to the bed
  - At destination, keep luggage off floors and beds, place them on high luggage racks
  - Do not unpack clothes
  - Always keep luggage closed
  - Place hanging items on shower rail
  - Keep shoes away from bed
  - Before checking out, seal suspicious items in plastic bags
  - On arriving home, unpack materials outside residence and take laundry etc. directly to washer and/or drier for immediate cleaning
  - Delicate items or objects can be frozen in a freezer for 5 days to kill all stages of bed bugs
