Cultural Competency: Race/Ethnicity
Changing Demographics:

Source: National Center for Health Statistics, 2002
Changing Demographics: Projected Percentage Resident Population by Race/Ethnicity, U.S. 2010-2070

As of July 1, 2011, the U.S. Census Bureau estimated that 50.4% of the population younger than 1 was minority.
In 2008, four states—Hawaii (77.1%), California (60.3%), New Mexico (59.8%), and Texas (55.2%)—plus the District of Columbia (64.7%) were already majority minority.

In the rest of the U.S., minorities constitute 36.6% of the population.

Discussion Questions about Race

• How would you define race? What does it mean to you?

• How many races do you think there are? What are they? How do you decide which race someone belongs to?

• Look around the room. Who do you think is likely to be most similar to you, biologically or genetically? Why?

• Where do your ideas about race come from? What are the sources of your information?
Sorting People by Race

• Can You Tell Someone’s Race by Looking at Him or Her?
Is Race for Real?

- **Race: The Power of an Illusion**
  - *Episode 1: The Difference between Us*
Discussion Questions

• Did the video clip change or challenge any of your assumptions about race?

• Two weeks from now, what will you most remember from the video clip and why?
Understanding Race vs. Ethnicity

Race

• A human population that is believed to be distinct in some way from other humans based on real or imagined physical differences

• Rooted in the idea of biological classification of humans according to morphological features such as skin color or facial characteristics.

Ethnicity

• Refers not to physical characteristics but social traits that are shared by a human population.

• Some of the social traits often used for ethnic classification include:
  – nationality
  – tribe
  – religious faith
  – shared language
  – shared culture
  – shared traditions

Delineating Ethnicity in the U.S.

• **Hispanic or Latino**: A person of Cuban, Mexican, Puerto Rican, South or Central American, or other Spanish culture or origin, regardless of race. The term “Spanish origin” can be used in addition to “Hispanic or Latino.”

• **Non-Hispanic or Latino**

Delineating Race in the U.S.

- **American Indian/Alaska Native:** Having origins in any of the original peoples of North and South America (including Central America), and who maintains tribal affiliation or community attachment.

- **Asian:** Having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.

- **Black/African American:** Having origins in any of the black racial groups of Africa. Terms such as “Haitian,” “Dominican,” or “Somali” can be used in addition to “Black or African American.”

- **Native Hawaiian/Other Pacific Islander:** Having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands.

- **White:** Having origins in any of the original peoples of Europe, the Middle East, or North Africa.

Ten Things Everyone Should Know about Race

1. Race is a modern idea.
2. Race has no genetic basis.
3. Human subspecies don’t exist.
4. Skin color really is only skin deep.
5. Most variation is within, not between, “races.”
7. “Race” and “freedom” were born together.
8. Race justified social inequalities as natural.
9. Race isn’t biological, but racism is still real.
10. Colorblindness will not end racism.
Ten Things Everyone Should Know about Race

Public Service Announcement
Changing Demographics: Language Proficiency

• Increased number of foreign born residents
  – 12.7% of U.S. residents
  – Almost 10% of Maryland residents
  – Almost 6% of Baltimore City residents

• Increased numbers speak a language other than English at home
  – 20.6% of U.S. residents
  – 12.6% of the Maryland population
  – 7.5% of the Baltimore City population

• Increased numbers speak English less than "very well" and are considered limited English proficient (LEP)
  – 8.7% of U.S. residents
  – 3.0% of the Baltimore population

Source: 2000 U.S. Census and 2009 American Community Survey
Changing U.S. Demographics

- Between 1990 and 2010, the U.S. LEP population increased 80%.
- Between 1990 and 2010, the 10 states experiencing the greatest growth in their LEP populations were:
  - Nevada (398.2%), North Carolina (395.2%), Georgia (378.8%), Arkansas (311.5%), Tennessee (281.4%), Nebraska (242.2%), South Carolina (237.2%), Utah (235.2%), Washington (209.7%), and Alabama (202.1%).

Changing State Demographics

- In 8 states, at least 10% of the overall population is already LEP.
  - California (19.8%), Texas (14.4%), New York (13.5%), New Jersey (12.5%), Nevada (12.3%), Florida (11.9%), Hawaii (11.8%), and Arizona (9.9%)

Number of Languages Spoken in Each State

U.S. Total = 322 languages
Perils for LEP Patients

• Receive lower quality health care
• Poorer compliance with medical recommendations
• Higher risk of medical errors
• Difficulties understanding their diagnosis or why they receive particular types of care
Perils for LEP Patients

- Disproportionately high rates of infectious disease and infant mortality
- Risk factors for serious and chronic diseases such as diabetes and heart disease
- Lower adherence with diabetes and asthma care regimens compared to English speakers
Perils for LEP Patients

• Particularly vulnerable to miscommunication when discharged from the Emergency Department
• Poorer follow-up after Emergency Department visits
• Discordant communication resulting in both lower patient and clinician satisfaction
Patient Safety and Healthcare Quality

• Types of Interpreters
  – Ad hoc interpreter
  – Bilingual staff
  – Contract interpreter
  – Hospital employed (or staff) interpreter
  – Qualified interpreter
  – Volunteer interpreter
• Research studies have documented that the safety and healthcare quality of LEP patients can be diminished due to language barriers.
Patient Safety and Healthcare Quality

• One study found that in 46% of emergency department cases, no interpreter was used for LEP patients.

• In addition, only 23% of teaching hospitals train physicians how to work with an interpreter.
A study analyzed 1,083 adverse incident reports from 6 Joint Commission-accredited hospitals for LEP vs. English-speaking patients for 7 months in 2005.

- This study found that a greater percentage of LEP patients experienced physical harm versus English-speaking patients, 49.1% and 29.5% respectively.

- The LEP patients also experienced higher levels of physical harm ranging from moderate temporary harm to death, 46.8% and 24.4% respectively.
Patient Safety and Healthcare Quality

• In an effort to provide language services, healthcare providers have sometimes resorted to drastic measures.

  – At one hospital, the emergency room used the Yellow Pages to find a restaurant that spoke a particular language and would ask one of the restaurant employees to interpret over the phone.
• Other hospitals have used:
  
  – untrained support staff,

  – strangers found in the waiting room or on the street,

  – taxi cab drivers, etc.
Patient Safety and Healthcare Quality

- In many instances, a family member serves as an interpreter, which raises privacy and other concerns.
  - For example, California State Senator Leland Yee remembers translating for his mother at the doctor's office when he was only six years old.
- Several states have introduced legislation forbidding children under sixteen from serving as interpreters.
Patient Safety and Healthcare Quality

- Untrained interpreters are more likely to commit errors in interpretation that can lead to adverse clinical consequences.
Concerns about untrained interpreters include:

- Lack of knowledge of medical terminology and confidentiality,
- Their priorities may conflict with those of the patients, and
- Their presence may inhibit discussions of sensitive issues, such as:
  - domestic violence, substance abuse, psychiatric illness, and sexually transmitted diseases.
Even at healthcare organizations with ample CLAS resources, providers chose to “get by” without an interpreter by:

- Communicating through gestures
- Using limited second language skills
- Relying on histories obtained by other physicians
- Using patients’ family members as ad hoc interpreters.
Patient Safety and Healthcare Quality

• Occasionally, a bilingual healthcare provider may be present.

• However, this is not without its problems as well.
  – For example, in one case, a mother whose daughter had fallen off her tricycle, lost custody for 48 hours because the doctor misinterpreted two Spanish words (Se pegó) as "I hit her" instead of "She hit herself."
• Care can be compromised or delayed in the absence of any language service (trained or untrained).

• In other instances, the consequences can be catastrophic.
A healthcare team misunderstood an eighteen year old man who said that he was *intoxicado*.

- The team misunderstood the term to mean "intoxicated" rather than "nauseated."

- As a result, the patient was treated for a drug overdose for thirty-six hours before the doctors realized that he had a brain aneurysm.

- He ended up being a quadriplegic and his family was awarded $71 million in a malpractice settlement.

- Qualified Bilingual Staff Model and Program
Best Practices: Adventist HealthCare (Rockville, MD)

• Qualified Bilingual Staff (QBS) Training Program
  – Targets bilingual, dual role staff.
  – Trains staff in proper interpreting skills.
  – 3-day training (24 hours total)
  – Prior to participation in the program, all applicants are tested through an oral exam to assess their level of language competency.
    • After passing the exam, participants are eligible to sit for certification as a QBS Level 1 or Level 2.
Best Practices: Adventist HealthCare (Rockville, MD)

• QBS Level 1
  – Can speak at a conversational level only.
  – Requires additional training in interpretation techniques and medical interpretation to progress to QBS Level 2.

• QBS Level 2
  – Understands basic interpretation and medical terminology.
  – Must attain QBS Level 2 status in order to interpret in the exam room.
Best Practices:
Adventist HealthCare (Rockville, MD)

• Training modules include:
  – Ethics of Interpreting
  – Legal and Regulatory Requirements
  – Medical Terminology
  – Cultural Competency
  – Diversity
  – Modes of Interpretation
  – Managing the Session
  – Transparency in a Patient-Provider Relationship
  – Cultural Broker Role

Hablamos Juntos:
Universal Symbols in Health Care

Symbols for Use in Health Care

Hablamos Juntos, an initiative of The Robert Wood Johnson Foundation, was launched to eliminate language barriers and improve the quality of health care for people with Limited English Proficiency (LEP). In a research endeavor with JRC Design, they examined the history and usage of visual symbols as communication tools in health care settings throughout the world.

The research showed that symbols can be an effective communications tool, particularly for LEP individuals. Further, a thoughtful, well-designed symbol system could assist English speakers as well as LEP people of many languages and cultures.

The symbols shown on this poster are the result of rigorous design and testing. It is a system with broad aesthetic, as well as practical, appeal.

Symbols are not the panacea for a poor signage system, nor will they solve wayfinding issues. But they can be part of a viable and dynamic system that can assist all people, regardless of their reading skill level, to feel more comfortable and confident within a health care facility.
• 10 healthcare organizations were selected to participate in the RWJF Speaking Together program (November 2006-December 2008)
  – This was an expansion of a previous program, *Hablamos Juntos*, which only focused on Spanish-speaking LEP patients.
  – Designed to use QI tools and techniques to improve the provision of language services.

Toolkit
Cultural Competency: Unconscious Bias in Health Care
What is Unconscious Bias?
What is Unconscious Bias?

• In 1995, Anthony Greenwald and M.R. Benaji hypothesized that our social behavior was not entirely under our conscious control.

• According to their study, the concept of *unconscious bias* (*hidden bias* or *implicit bias*) suggests that:

  “Much of our social behavior is driven by learned stereotypes that operate automatically—and therefore unconsciously—when we interact with other people.”

Applying Unconscious Bias

“Schemas are simply templates of knowledge that help us organize specific examples into broad categories. Schemas exist not only for objects, but also for people. Automatically, we categorize individuals by age, gender, race and role. Once an individual is mapped into that category, specific meanings associated with that category are immediately activated and influence our interaction with that individual.”

UCLA Law Professor, Jerry Kang
How Does Unconscious Bias Work in Everyday Life?

“The Story of Alex, Joel, and Zachariah”
Implicit Association Test: Understanding the Tool

• How does the IAT work?
  – The tool presents a method that demonstrates the conscious-unconscious divergences.

• What is *Project Implicit*?
  – Project Implicit is a collaborative investigation effort between researchers at Harvard University, the University of Virginia, and University of Washington.
  – The studies examine thoughts and feelings that exist either outside of conscious awareness or outside of conscious control.

• The goal of this project is to make this technique available for education (including self educations).
Implicit Association Test (IAT): Discussion

Do not share your individual results.

• Which IAT tests did you complete?

• What were your reactions to completing the tests?

• Were you surprised by the results?
IAT: What do the results tell you?

Percent of web respondents with each score:

- Strong automatic preference for White people compared to Black people: 27%
- Moderate automatic preference for White people compared to Black people: 27%
- Slight automatic preference for White people compared to Black people: 16%
- Little to no automatic preference between Black and White people: 17%
- Slight automatic preference for Black people compared to White people: 6%
- Moderate automatic preference for Black people compared to White people: 4%
- Strong automatic preference for Black people compared to White people: 2%

Click for detailed summary
Findings Observed of the Project Implicit Study

• Implicit biases are pervasive.

• People are often unaware of their implicit biases.

• Implicit biases predict behavior.

• People differ in levels of implicit bias.
Understanding Unconscious Bias in Health Care
Unconscious Bias in Healthcare

• Unconscious Bias studies in clinical care show indication of patient preference and issues related to clinical decision-making
  – Psychological testing shows white physicians have friendlier attitudes toward anonymous white people than toward black people.
  – Healthcare providers’ unconscious racial biases leave patients dissatisfied.

• Unconscious Race and Social Bias among Medical Students
  – Study shows no significant relationship between implicit biases and clinical assessments in first year medical students

Clinical Examples
Clinical Examples

SICKLE CELL IS MOST COMMON IN PEOPLE OF ANCESTRY FROM AFRICA, SOUTH OR CENTRAL AMERICA, CARIBBEAN ISLANDS, INDIA, SAUDI ARABIA AND MEDITERRANEAN COUNTRIES SUCH AS TURKEY, GREECE, AND ITALY.

2009 SCDAAP POSTER CHILD GIOVANNA POLI
Clinical Examples
“I long believed,” he writes, “that the errors we made in medicine were largely technical ones.. But as a growing body of research shows, technical errors account for only a small fraction of our incorrect diagnoses and treatments. Most errors are mistakes in thinking. And part of what causes these cognitive errors is our inner feelings, feelings we do not readily admit to and often don’t recognize” (p. 40)
How Does Unconscious Bias Contribute to Health and Healthcare Disparities?
What are Health Disparities?

“"A particular type of **health difference** that is closely linked with **social, economic, and/or environmental disadvantage**. Health disparities adversely affect groups of people who have systematically experienced greater obstacles to health based on their **racial or ethnic group; religion; socioeconomic status; gender; age; mental health; cognitive, sensory, or physical disability; sexual orientation or gender identity; geographic location; or other characteristics historically linked to discrimination or exclusion.**”

Healthy People, 2020
What are Health Disparities?

• “A particular type of health difference that is closely linked with social, economic, and/or environmental disadvantage.

Health disparities adversely affect groups of people who have systematically experienced greater obstacles to health based on their racial or ethnic group; religion; socioeconomic status; gender; age; mental health; cognitive, sensory, or physical disability; sexual orientation or gender identity; geographic location; or other characteristics historically linked to discrimination or exclusion.”

Healthy People 2020
Examples of Healthcare Disparities: Blacks/African Americans

- Lower rates of cardiac surgeries
- Fewer hip and knee replacements
- Fewer kidney and liver transplants
- Diabetic and non-diabetic Blacks amputated more often.
- More likely to receive open surgeries than laparoscopic surgeries
- Less likely to receive lung cancer surgery
- Received less pain medication for same injuries and diseases

*Unequal Treatment*, 2003.
Examples of Healthcare Disparities: Blacks/African Americans

Even with same insurance as Whites:

• Black cardiac patients received
  – Less catheterization, less angioplasty, less bypass surgery
  – Less likely to receive beta blockers, anticlotting drugs or aspirin

• Black ER patients more likely referred to residents rather than attendings

• Black ER patients with long bone fractures less likely to receive opioids and other analgesics

*Unequal Treatment*, 2003.
Examples of Healthcare Disparities: Latinos/Hispanics

• Less angioplasty and bypass surgery

• Less access to mental health care

• Don’t receive basic recommended preventive screenings
  – Mammograms, Pap smears, colonoscopies, cardiovascular screening, influenza vaccines, and diabetes screening

*Unequal Treatment*, 2003.
Examples of Healthcare Disparities: Latinos/Hispanics

• Latino/Hispanic ER patients with long bone fractures less likely to receive opioids and other analgesics
• Less likely to receive pain medication for cancer pain
• Less likely to receive pain medication during childbirth, e.g. epidurals

Examples of Healthcare Disparities: Women

• Less angioplasty and bypass surgery
• Less aspirin, beta-blockers, cholesterol-lowering drugs after having a heart attack
• Can take significantly longer for EMS to get women with heart attacks to the hospital
• Fewer organ transplants after age 45
• Receiver fewer joint replacements

Identify If You See an Element of Unconscious Bias in Health Care
Identify If You See an Element of Unconscious Bias in Health Care

In what ways did Mrs. Smith’s beliefs, biases, or behaviors influence her ability to treat the Holly?
Practical Tips to Combat Unconscious Bias in Health Care
Practical Tips to Combat Unconscious Bias in Health Care

1. Have a basic understanding of the cultures your patients come from.

2. Don’t stereotype your patients, Individuate them

3. Understand and respect the tremendous power of unconscious bias

4. Recognize situations that magnify stereotyping and bias

5. Know the CLAS Standards

National Standards for Culturally and Linguistically Appropriate Services (CLAS) in Health and Health Care

The National CLAS Standards are intended to advance health equity, improve quality, and help eliminate health care disparities by establishing a blueprint for health and health care organizations to:

Principal Standard:
1. Provide effective, equitable, understandable, and respectful quality care and services that are responsive to diverse cultural health beliefs and practices, preferred languages, health literacy, and other communication needs.

Governance, Leadership, and Workforce:
2. Advance and sustain organizational governance and leadership that promotes CLAS and health equity through policy, practices, and allocated resources.
3. Recruit, promote, and support a culturally and linguistically diverse governance, leadership, and workforce that are responsive to the population in the service area.
4. Educate and train governance, leadership, and workforce in culturally and linguistically appropriate policies and practices on an ongoing basis.

Communication and Language Assistance:
5. Offer language assistance to individuals who have limited English proficiency and/or other communication needs, at no cost to them, to facilitate timely access to all health care and services.
6. Inform all individuals of the availability of language assistance services clearly and in their preferred language, verbally and in writing.
7. Ensure the competence of individuals providing language assistance, recognizing that the use of untrained individuals and/or minors as interpreters should be avoided.
8. Provide easy-to-understand print and multimedia materials and signage in the languages commonly used by the populations in the service area.

Engagement, Continuous Improvement, and Accountability:
9. Establish culturally and linguistically appropriate goals, policies, and management accountability, and infuse them throughout the organization’s planning and operations.
10. Conduct ongoing assessments of the organization’s CLAS-related activities and integrate CLAS-related measures into measurement and continuous quality improvement activities.
11. Collect and maintain accurate and reliable demographic data to monitor and evaluate the impact of CLAS on health equity and outcomes and to inform service delivery.
12. Conduct regular assessments of community health assets and needs and use the results to plan and implement services that respond to the cultural and linguistic diversity of populations in the service area.
13. Partner with the community to design, implement, and evaluate policies, practices, and services to ensure cultural and linguistic appropriateness.
14. Create conflict and grievance resolution processes that are culturally and linguistically appropriate to identify, prevent, and resolve conflicts or complaints.
15. Communicate the organization’s progress in implementing and sustaining CLAS to all stakeholders, constituents, and the general public.
Practical Tips to Combat Unconscious Bias in Health Care

6. Do a “Teach Back”

7. Assiduously Practice “Evidence-Based Medicine”
