**Re: Connecticut Siting Council Docket No. F-2005
Dominion Nuclear Connecticut, Inc. ("DNC") – Pre-filed Testimony of Daniel A. Weekley**

Dear Mr. Phelps:

Enclosed please find the original and twenty-five (25) copies of the pre-filed testimony of Daniel A. Weekley, Director Northeast Government Affairs. Mr. Weekley will appear as a witness on DNC's behalf at the Siting Council's July 14, 2005 hearing on the above referenced docket.

If you have any questions with respect to this filing or need any additional information please contact me.

Sincerely,

A handwritten signature in cursive script that reads "Lillian Cuoco".

STATE OF CONNECTICUT
CONNECTICUT SITING COUNCIL

IN RE: :
 :
REVIEW OF THE TEN-YEAR FORECAST :
OF CONNECTICUT ELECTRIC LOADS :
AND RESOURCES : DOCKET NO. F-2005

PRE-FILED TESTIMONY OF DANIEL A. WEEKLEY
ON BEHALF OF DOMINION NUCLEAR CONNECTICUT, INC.

My name is Daniel A. Weekley. I am the Director, Northeast Government Relations for Dominion Resources, Inc. ("DRI"), the parent company of Dominion Nuclear Connecticut, Inc., ("DNC"). DNC is the majority owner and sole operator of the Millstone Power Station ("Millstone") in Waterford, Connecticut. This testimony is offered in support of DNC's Report of Forecast of Loads and Resources dated February 25, 2005, filed with the Siting Council ("Council").

As the Council is aware, Millstone consists of three nuclear generating units. Millstone Units 1 and 2 are owned in their entirety by DNC. DNC owns 93.47% of Millstone Unit 3. The remaining interest in Unit 3 is owned by the Massachusetts Municipal Wholesale Electric Company (4.8%) and Central Vermont Public Service Corporation (1.73%). Millstone Unit 1 permanently ceased operations in 1998. Millstone Units 2 and 3 are DNC's sole power generating assets in the State of Connecticut. Millstone Unit 2 has the capacity to generate 883.5 megawatts of electricity and Unit 3 has the capacity to generate 1156.5 megawatts of electricity.

As stated in DNC's February 25, 2005 filing, Millstone Units 2 and 3 generated: (a) 14,275,488 megawatt ("MW") hours of electricity between April 1, 2001 and January 31, 2002;

(b) 14,888,556 MW hours of electricity between February 1, 2002 and January 31, 2003; (c) 16,145,175 MW hours of electricity between February 1, 2003 and January 31, 2004; and 16,542,323 MW hours of electricity between February 1, 2004 and January 31, 2005. One hundred percent of Millstone's output of electricity is delivered to the New England power grid.

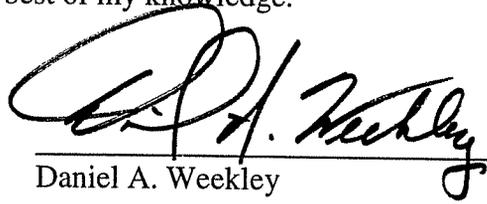

According to ISO New England, for the years 2000 through 2004, Millstone generation output would have been sufficient to satisfy approximately 47% of Connecticut's total load requirements. This is notable considering Millstone's output is only 26.8% of Connecticut's generation capacity. The difference in Millstone's generation capacity compared to the output used to satisfy the State's load requirements is primarily attributable to low cost generation and safe and reliable operations.

DNC and its parent company, DRI, continue to support the efforts of the Council in conducting its annual review of electric loads and resources and find the process to be a valuable tool to help plan for the future electric needs of the residents and businesses of the State of Connecticut. DNC continues to be a major generator of electric power in Connecticut and is committed to the long-term energy needs of the State of Connecticut. As the Council is aware, DNC submitted applications for license renewal for Millstone Units 2 and 3 to the United States Nuclear Regulatory Commission ("NRC") on January 22, 2004. Upon license renewal, Unit 2's license period will be extended to 2035 and Unit 3's license period will be extended to 2045. Accordingly, Millstone will continue to be a valuable source of generation in the State of Connecticut during the next ten years and well into the future.

Thank you for the opportunity to present this information.

The statements above are true and accurate to the best of my knowledge.
