

June 16, 2005

Mr. Joel M. Rinebold
Connecticut Center for Advanced Technology, Inc.
111 Founders Plaza Suite 1002
East Hartford, CT 06108

Dear Mr. Rinebold:

RE: Docket No. F-2005 Connecticut Siting Council Review of the Ten-Year Forecast of Connecticut Electric Loads and Resources

Please see the responses below to your request of June 7, 2005 that PSEG Power Connecticut LLC (PSEG) respond to interrogatories in the above captioned matter.

- 1) Are there plans to retire Bridgeport Unit #2 or any other units owned or operated by PSEG in Connecticut within the forecast period? If so, what units would be retired, and what is the anticipated retirement date? Are there plans and/or a conceptual schedule for the repowering of any generating units?

Answer: There are no retirement plans at this time. Neither are there any plans for repowering.

- 2) Does PSEG have any plans and/or conceptual schedules for the development of new generation, including distributed generation that could be strategically sited to help alleviate constrained circuits and/or mitigate FMCCs?

Answer: PSEG has no plans or schedules for additional generation in Connecticut at this time.

- 3) Please outline the advantages and disadvantages of mechanisms to provide enhanced generator availability, including but not limited to, fuel diversity standards, resource diversity standards, and/or firm fuel supply contracts.

Answer: PSEG has not considered or studied any mechanisms of the type described. However, imposing requirements on wholesale generators for fuel diversity standards, resource diversity standards or firm fuel supply contracts would not be in the best

interests of the State of Connecticut or the power generation industry.

- 4) Have the generators and/or utilities come to any agreement over the identification of the most appropriate technical mix of resources for conservation, demand response, generation, distributed generation, and transmission, or is there support for this mix to be driven entirely by the market?

Answer: There is no agreement of this type that we are aware of. Neither has PSEG had any discussions with others on these subjects.

- 5) Have the generators and/or the utilities come to any agreement over the identification of the most appropriate public and/or ratepayer funding levels for conservation, demand response, and renewable/clean generation?

Answer: There is no agreement of this type we are aware of. Neither has PSEG had any discussions with others on these subjects.

Very truly yours,

Harold W. Borden
Vice President and General Counsel
