Re: Wetland Impact Analysis
Optasite ID CT-999-0099
1 Deerfield Lane
Ansonia, CT

Vanasse Hangen Brustlin, Inc. (VHB) previously completed on-site investigations to determine if wetlands and/or watercourses are located on the above-referenced Site.

The Site was inspected on January 9, 2007. The project area is currently utilized as a horse farm with associated structures and corrals. A forested wetland area was identified in the east portion of the site south of the existing paved access (refer to January 30, 2007 Wetlands Delineation Report for further details).

Based on Site Access Map prepared by Clough Harbour & Associates LLP, dated 03/13/07, Optasite proposes to construct a telecommunications facility within an existing horse corral along with a gravel drive for access from the existing paved access. The proposed gravel access is located approximately 200 feet north of the forested wetland area while the actual facility is located more than 400 feet away. As no direct impact to wetlands will occur as a result of the proposed development and work will occur within existing developed areas far removed from wetlands, no likely adverse impact to nearby wetlands or watercourse will result from the proposed work.
