Re: **Request for Technical Plan Revision**  
Permit Nos.: WQC-201205697  
Project: Interstate Reliability Project  
USACOE No.: NAE-2008-1671  
Towns: Coventry

Dear Mr. Deptula:

The department has completed a review of your November 13, 2014 request for a technical plan revision to the above referenced Clean Water Act Section 401 Water Quality Certification. The revision involves having Structure 34 (temporary work pad) remain on the ground one month longer than the three month period specified in Special Condition #7 of the referenced permit. You state that this is necessary because of delays in securing the required personnel to provide supervision at the New England Central railroad line in the vicinity.

Your request for technical plan revision is hereby approved. Special Condition #7 is hereby revised to require removal of Structure 34 by December 20, 2014.

If you have questions regarding this matter please contact Doug Hoskins at (860) 424-4192, douglas.hoskins@ct.gov. All correspondence regarding this permit should reference the permit numbers identified above and be addressed to Doug Hoskins, Inland Water Resources Division, Bureau of Water Protection and Land Reuse, Department of Energy and Environmental Protection, 79 Elm St., Hartford, CT 06106-5127.
