RE: 2012 Load Forecast PPL Wallingford Energy, LLC

Dear Ms. Roberts:

PPL Wallingford Energy, LLC ("PPL Wallingford") presents the following information for the Siting Council's use in its annual forecast of loads and resources.

During part of 2011, PPL Wallingford owned and operated five (5) LM6000 simple cycle generating units, each with a capacity of forty-five (45) megawatts, located in Wallingford, Connecticut (the "Facility") through March 8, 2011. The Facility operated in a peaking mode. The Facility used natural gas as its sole fuel. The Siting Council approved the construction of the Facility in Petition No. 451. On March 9, 2011, the facility was sold to Harbor Gen Holdings, LLC.

Please contact me if you have any questions.

Very truly yours,

Jesse A. Dillon
