DEPARTMENT OF BUSINESS REGULATION

POWER FACILITY EVALUATION COUNCIL

Petitions 63 and 64
Hartford and New Haven
February 17, 1981

Dr. Horsfall, Mr. Doocy, Christopher Wood, and Duncan Reid met Mr. Szalkiewicz of Connecticut Transit for a field inspection of Petitions 63 and 64.

The Department of Transportation intends to replace existing towers designed for radio transmission and receiving with heavier towers capable of supporting microwave antennae. The proposed towers are to be 70 feet high. The existing towers are mounted on the roofs of the bus service center buildings at 53 Vernon Street, Hartford and 470 James Street, New Haven. The new tower in Hartford is to be located in the same place as the existing tower; the new tower in New Haven will be mounted on the bus service center roof approximately 100 feet south of the existing facility. Additional information has been requested from the Department of Transportation.
