Petition 102 - Northeast Utilities
Haddam, Ct.
Telecommunications Facility

Northeast Utilities has submitted a petition for a ruling that the addition of electronic equipment to a telecommunications facility and the activation of existing antennas will not have substantial adverse environmental effect.

The tower structure and antennas involved were installed prior to Council jurisdiction for such facilities. However, according to present regulations for telecommunications facilities any change increasing the measured power density at a facility base may constitute a modification.

NU provided expected power density levels which indicate that increases would be minute and that the total would still be far below known or proposed standards.

There will be no visible or otherwise apparent changes to the facility. NU states that not all antennas are to be activated at this time and that they will notify the Council when other existing antennas are put into use.
