Petition No. 162  
Northeast Utilities  
Manchester Substation  
September 16, 1986

Owen L. Clark, Pamela B. Katz and Robert K. Erling of the Siting Council met Lucian Gehami and George Becker of Northeast Utilities (NU) for a field review of proposed work at the Manchester Substation. NU proposes to install an Emergency Satellite Office Trailer within the confines of this 115 kV Substation. The Trailer is needed to facilitate storm emergency operations in the Manchester area. The trailer would measure 60'X14'X11' and would house telephone, radio and computer equipment. The trailer would be installed 10'-15' from the existing chain link fence surrounding this substation.

Field review team members proposed the planting of additional white pine trees outside the fence to provide screening. Mr. Gehami indicated that NU would comply with such planting.

No television or radio interference is expected as a result of this trailer's installation. NU plans to begin construction of this trailer in October, 1986, and complete the installation by November, 1986.
