

Fig. 2. Generalized geologic map of the Deep River quadrangle and adjacent quadrangles illustrating the major structural features of the region, modified from Landgren (1962). The geology of the Middle Haddam quadrangle is based on Rodgers and others (1959), that of the Moodus quadrangle on unpublished mapping by L. P. Ashmead, and that of the Haddam and Clinton quadrangles on Mikami and Dignan (1957) as well as on reconnaissance by the present author.
