

## Setting Internet Options for NetDMR Browsing Accessibility

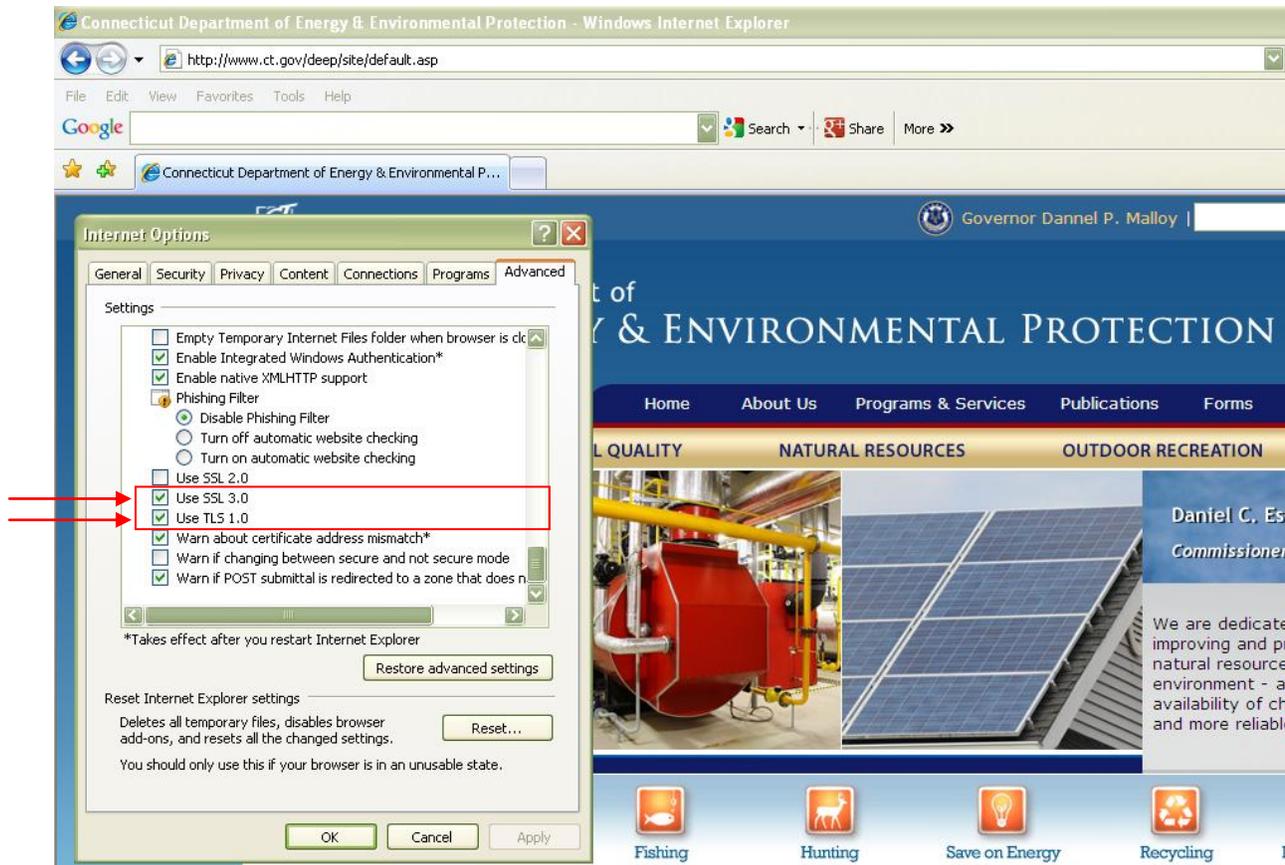

- If you are having trouble opening the NetDMR Test Website or Live Website in your internet browser, you may need to edit your browsing accessibility. To do this, select **Tools** at the top of your internet browsing window and select **Internet Options**.

- Within **Internet Options**, select the **Advanced** tab.

- Scroll to the bottom of the **Settings** list and check the boxes to **Use SSL 3.0** and **Use TLS 1.0**.

- Select **OK** and return to Step 1 of *Instructions for Creating an Account and Requesting Access to Use NetDMR as an Individual NPDES or Pretreatment Permittee*.

If you are still unable to access NetDMR, contact your facility's Information Technology department as your internet options may need further modifications.
