Rules and Regulations

Before shellfishing in Connecticut, it is important to review the local rules and regulations. Shellfishing regulations are established and enforced to protect human health and also to preserve the living marine resources and ecosystem within which they exist. Each municipality within the State sets its own shellfisheries regulations including shellfishing species, size restrictions, harvest limits, and closures. The State allows shellfishing between sunrise and sunset and recreational seasons are year round with a few exceptions.

There are a variety of implements to take shellfish, such as rakes or tongs. These tools must have openings or spacing between the teeth or prongs of one inch or greater. Some towns may restrict specific types. To measure your shellfish, be sure to carry a shellfish ring, slot or gauge.

Public Health and Seafood Safety

Harvesting is limited to “Approved” or “Conditionally Approved - Open” areas. Periodically, shellfishing areas may be closed due to rainfall or pollution events. Status of these areas can be obtained by calling the local shellfish information line or by checking with status signs. Status signs are posted at these areas for your convenience. These classifications have been established by the State to minimize health risks, and shellfishing in closed areas (Conditionally Approved-Closed, Restricted, and Prohibited areas) whether for bait or personal consumption is illegal.

Recreational shellfish are intended to be consumed by the harvester and family members. Recreational harvesters cannot offer their shellfish for sale or barter. Harvesters must take care to properly handle their catch. Shellfish should be promptly refrigerated in a self-draining container. They should never be stored in water or hung overboard from a dock or boat since they are filter feeders and may concentrate contaminants from that new environment.

A Healthy Environment

In the interest of preventing growth of non-native species, disease and parasites, no shellfish taken from or originating from areas outside of Long Island Sound may be placed, planted, or disposed of in Long Island Sound and its tributaries without written approval of the Connecticut Department of Agriculture, Bureau of Aquaculture. The introduction of non-native organisms can be damaging to our environment.

The following guide summarizes recreational shellfishing information for individual municipalities. The Connecticut Sea Grant Extension Program has made every effort to ensure the accuracy of this information. Contact your local shellfish commission to find out where to purchase shellfishing licenses, and to receive notification about shellfish ground closures in your area. Enjoy the season!

Getchis, T.S. 2007. A Guide to Recreational Shellfishing in Connecticut. Connecticut Sea Grant College Program. Groton, CT. CTSG-04-06R. 7pp.

Sea Grant is a unique partnership between the nation's universities and its primary ocean agency, the National Oceanic and Atmospheric Administration (NOAA). Connecticut Sea Grant, based at the University of Connecticut, collaborates with maritime industries and coastal communities to identify needs, and fund research, outreach, and educational activities that have special relevance to Connecticut and Long Island Sound. Its mission is to foster the wise use and conservation of our nation's coastal and marine resources.

Eastern Oyster

Crassostrea virginica

The eastern oyster grows in intertidal and subtidal waters attached to rocks, pilings and shells. Oysters can attain a length of up to 6 inches.

Hard, Round, or Quahog Clam

Mercenaria mercenaria

Quahogs are very common in Long Island Sound. This clam may grow to 5 inches and to greater than 30 years of age

Soft-shell, or Steamer clam

Mya arenaria

The soft-shell clam is common in sandy and muddy bottoms. This clam digs a deep burrow and extends its long siphon to the surface to feed.

Razor clam, or Jackknife clam

Ensis directus

Razor clams commonly inhabit the same sediment types as soft-shell clams. These clams can grow up to 10 inches in length.

Surf clam

Spisula solidissima

Surf clams are common in subtidal sandy areas. These clams can attain a length of up to 8 inches.

Blue Mussel

Mytilus edulis

The edible blue mussel is found throughout Long Island Sound. It attaches to most hard surfaces with its byssal threads.

Bay Scallop

Argopectin irradians irradians

The bay scallop lives in estuaries and is commonly found in eelgrass beds. This scallop lives only two seasons, but its small meat (adductor muscle) is prized

Whelks, Conch, Winkles or Scungilli

Busycon species

Several species of large edible snails are common in Long Island Sound. They are usually found on sandy bottoms.

Recreational limit is 1/2 bushel per day.

RECREATIONAL SHELLFISH PERMIT FEES
