Project Description
The Connecticut Department of Transportation (CTDOT) has identified Bridge No. 01487, a steel truss bridge, as being in need of minor repairs. The subject bridge supports Route 177 over the Farmington River in the Town of Farmington. The overall condition of Bridge No. 01487 is poor. The purpose and need for this project is to bring the overall condition of the bridge back to satisfactory. The proposed repairs include replacing the pedestrian bridge rail, replacing the sidewalk and joints, replacing metal beam rail, repairing a drainage pipe and providing outlet protection, painting the northern abutment fascia, completing miscellaneous steel repairs, and partial blast cleaning and partial painting of the bridge.

Bridge No. 03245, a culvert under Route 177, has been identified as a structure to be removed from the State Bridge Inventory list. The structure will be filled with a flowable fill material and will no longer need to be inspected and maintained by the State of Connecticut.

It is anticipated that the proposed construction will utilize alternating one-way traffic during off peak hours and maintain two-way traffic during peak hours. One sidewalk will remain open at all times during the project for pedestrian access.

Construction
Construction is anticipated to begin in the spring of 2019. It is estimated that the construction project will take approximately 6 months to complete. The estimated construction cost is $2.4 Million.
