Definitions and Features

The HAWK (or High-Intensity Activated CrossWalk) pedestrian signal is a type of traffic control device designed to allow pedestrians to safely cross streets with high volumes of traffic. In an effort to increase pedestrian safety, the Connecticut Department of Transportation has begun an initiative to install HAWK signals at select locations throughout the state.

The HAWK signal is composed of a circular yellow signal centered under two horizontally-aligned circular red signals.

HAWK signals only operate when a pedestrian activates a push button at the pedestrian crossing. The signal activates stop control requiring vehicles to stop when a pedestrian crosses and then allows vehicles to move once pedestrians have finished crossing. Pedestrian signals will notify pedestrians when it is safe to cross the roadway.

The HAWK signal is one of the Federal Highway Administration’s Proven Safety Countermeasures, providing the following safety benefits:

- 69% reduction of pedestrian crashes
- 29% reduction of total roadway crashes

Isolated crossings with marked crosswalks will be the only locations eligible for HAWK signal installations.

How HAWK Signals Work

The following describes the indications on a typical HAWK pedestrian signal:

- **DARK**—HAWK signal has not been activated. Vehicles proceed through pedestrian crossing.
- **FLASHING YELLOW**—Pedestrian has activated the HAWK signal.
- **SOLID YELLOW**—Pedestrian signal is about to change. Motorists are notified their movement is being terminated and a red signal will be displayed.
- **SOLID RED**—Pedestrian is in the crosswalk. Motorists must stop.
- **FLASHING RED**—The HAWK signal is about to deactivate. Drivers must stop but may proceed when pedestrians have cleared the crosswalk.
HAWK Pedestrian Signal Operation

The following demonstrates what motorists and pedestrians will experience when approaching a crossing with a HAWK pedestrian signal:

<table>
<thead>
<tr>
<th>Meaning:</th>
<th>What Motorists See:</th>
<th>What Pedestrians See:</th>
<th>Meaning:</th>
</tr>
</thead>
<tbody>
<tr>
<td>HAWK is deactivated</td>
<td><img src="image1" alt="Image" /></td>
<td><img src="image2" alt="Image" /></td>
<td>Press button to cross</td>
</tr>
<tr>
<td>HAWK has been activated.</td>
<td><img src="image3" alt="Image" /></td>
<td><img src="image4" alt="Image" /></td>
<td>Wait to cross</td>
</tr>
<tr>
<td>Vehicle right of way is ending. Motorists will be required to stop.</td>
<td><img src="image5" alt="Image" /></td>
<td><img src="image6" alt="Image" /></td>
<td>Wait to cross</td>
</tr>
<tr>
<td>Stop</td>
<td><img src="image7" alt="Image" /></td>
<td><img src="image8" alt="Image" /></td>
<td>Cross the street</td>
</tr>
<tr>
<td>Stop. Proceed if crosswalk is clear.</td>
<td><img src="image9" alt="Image" /></td>
<td><img src="image10" alt="Image" /></td>
<td>Pedestrians in crosswalk may continue to cross. Pedestrians at push button must wait.</td>
</tr>
<tr>
<td>HAWK is deactivated</td>
<td><img src="image11" alt="Image" /></td>
<td><img src="image12" alt="Image" /></td>
<td>Press button to cross</td>
</tr>
</tbody>
</table>

Further Information on HAWK Pedestrian Signals
