

Table 1. Viral load<sup>a</sup> status of adults and adolescents (>= 13 years of age on 12/31/2012) residing in Connecticut (based on the most recent residence before death), diagnosed with HIV infection through 12/31/2012 and living with HIV infection on 12/31/2013, by selected characteristics - based on HIV surveillance data reported through 12/24/2014.

Characteristics	Persons diagnosed with HIV infection through 12/31/2012 and living with HIV on 12/31/2013 (overall population <sup>b</sup> )		Persons with >=1 VL test from 01/01/2013 through 12/31/2013			
	No.	% <sup>c</sup>	Yes		No	
			No.	%	No.	%
<b>Sex</b>

<b>Total</b>	<b>9875</b>	<b>100</b>	<b>7379</b>	<b>74.72</b>	<b>2496</b>	<b>25.28</b>

<sup>a</sup>The validity of the Monitored Viral Load output that results from this analysis is dependent upon the completeness and quality of state/local HIV surveillance data.

<sup>b</sup>The overall population may be overestimated because only 11 months were allowed for follow-up of cases after 12/31/2013. CDC recommends that every case be allowed at least 18 months for follow-up in order to collect death certificate information.

<sup>c</sup>The total percent represents the column percent.

<sup>d</sup>American Indian/Alaska Native, Asian, Native Hawaiian/Other Pacific Islander, Multiple races, and unknown race.

<sup>e</sup>Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
