

# ON-SITE SEWAGE DISPOSAL SYSTEMS

**Sean Merrigan, SE3**

**Connecticut Department of Public Health  
Environmental Engineering Program**

**Phone: (860) 509-7296**

# Regulatory Jurisdiction of Sewage Disposal Systems in CT

**CT Department  
of Energy &  
Environmental  
Protection**

**Local and State  
Department of  
Public Health**

# Department of Energy and Environmental Protection

- Design Flows Exceeding 5,000 GPD, and Alternative & Community Systems
- Large commercial properties, large schools & restaurants, apartments, condominiums

# State and Local Health Departments

- Conventional Septic Systems with Design Flows of 5,000 Gallons Per Day (GPD) and Less
- Single-family homes, small commercial properties, small schools, churches

# CONNECTICUT PUBLIC HEALTH CODE

## On-site Sewage Disposal Regulations, and Technical Standards for Subsurface Sewage Disposal Systems

**PHC Section 19-13-B100a** (e.g., Building Conversions, Changes in Use, Building Additions)

Effective August 3, 1998

**PHC Section 19-13-B103** (Design Flows 5,000 Gallons per Day or Less)

Effective August 16, 1982

### **Technical Standards for Subsurface Sewage Disposal Systems**

Effective August 16, 1982

Former revisions: 1986, 1989, 1992, 1994, 1997, 2000, 2004, 2007, 2009, 2011

Revised January 1, 2015

**PHC Section 19-13-B104** (Design Flows Greater than 5,000 Gallons per Day)

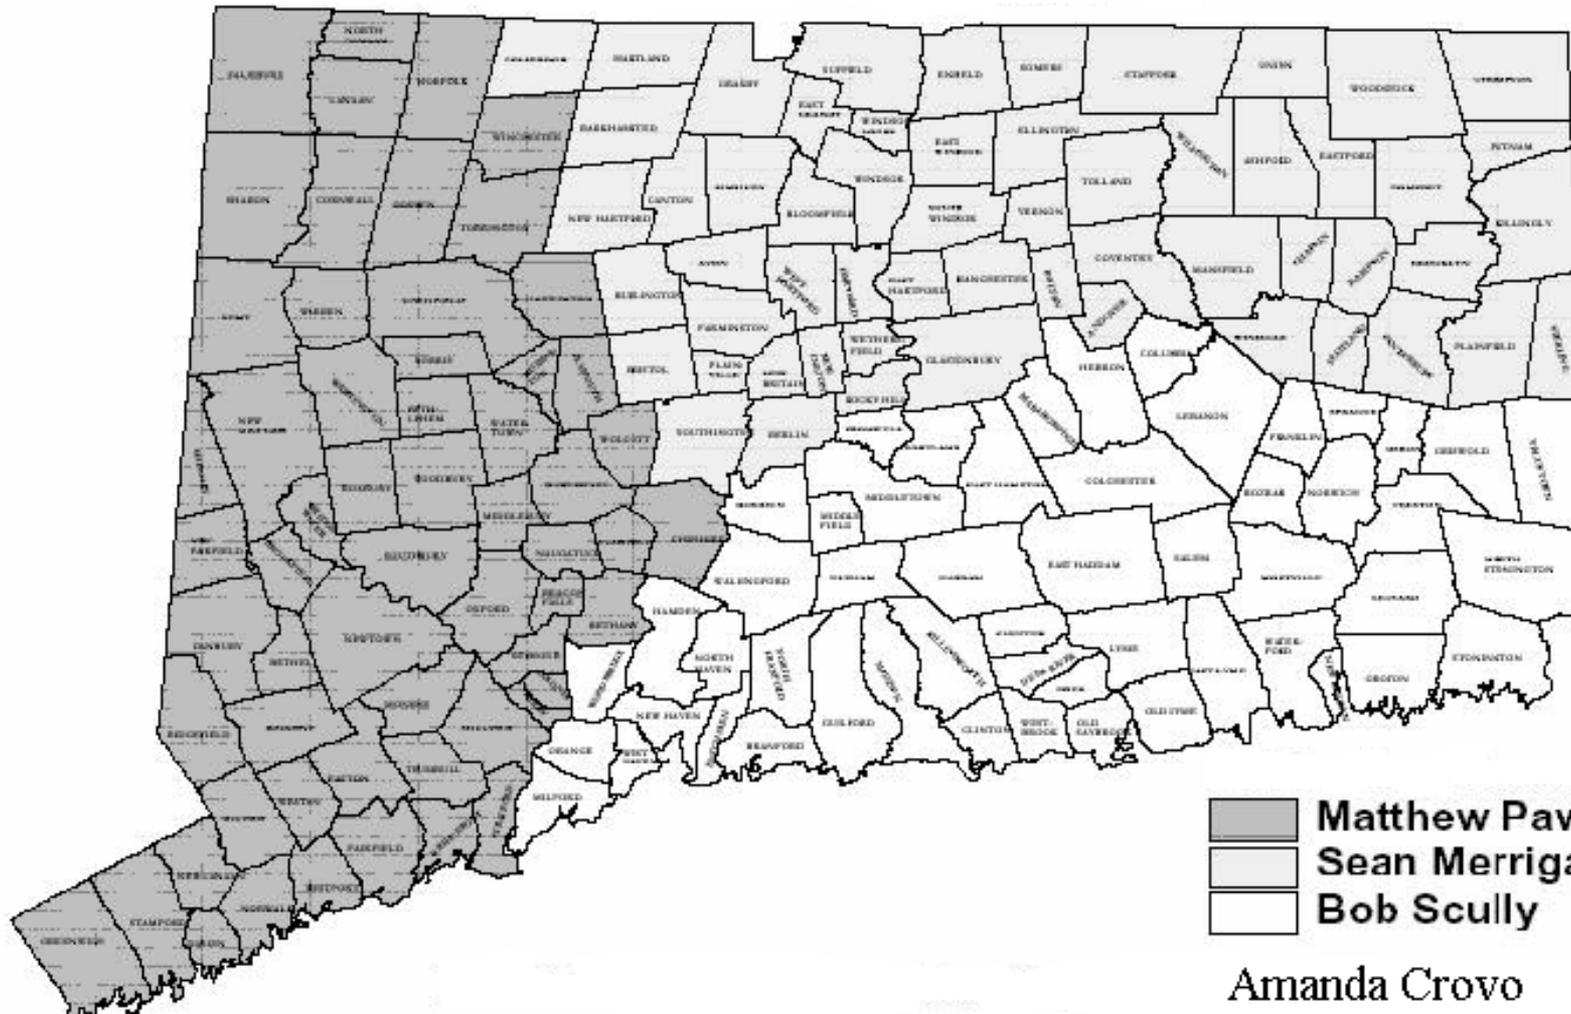

Effective August 16, 1982

-  **Bob Scully**

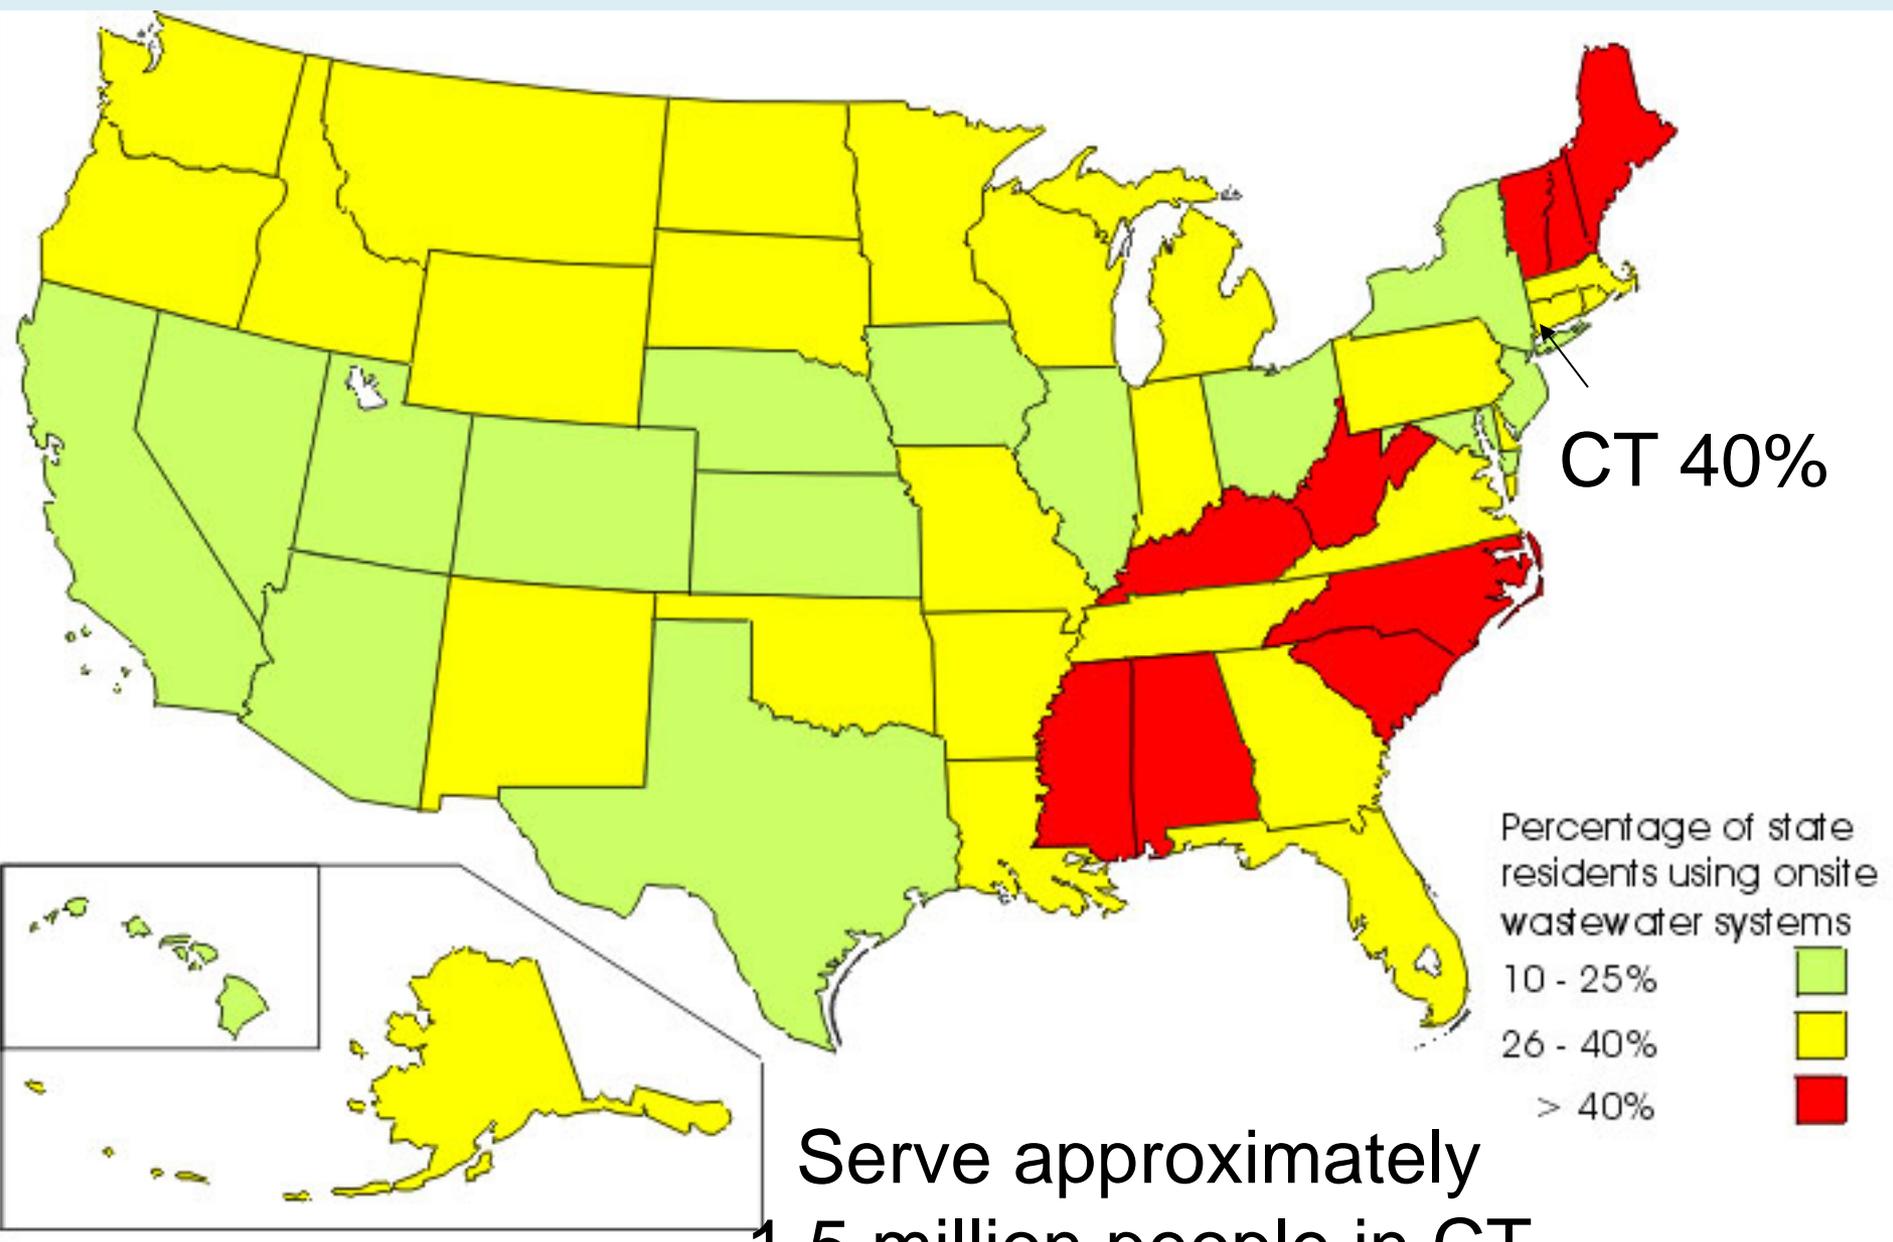

Amanda Crovo  
Training Coordinator

# Local Health Departments

- Perform site testing, plan reviews, inspections, issue permits for small systems.
- Investigate complaints of sewage odors and possible failures.
- LHD may issue orders if no response from property owners

# Why A Septic System?

- Low density – towns wish to remain rural
- Public sewers too costly in rural areas
- Cost effective with proper maintenance (pump septic tanks every 3-5 years)
- Typically cause less pollution

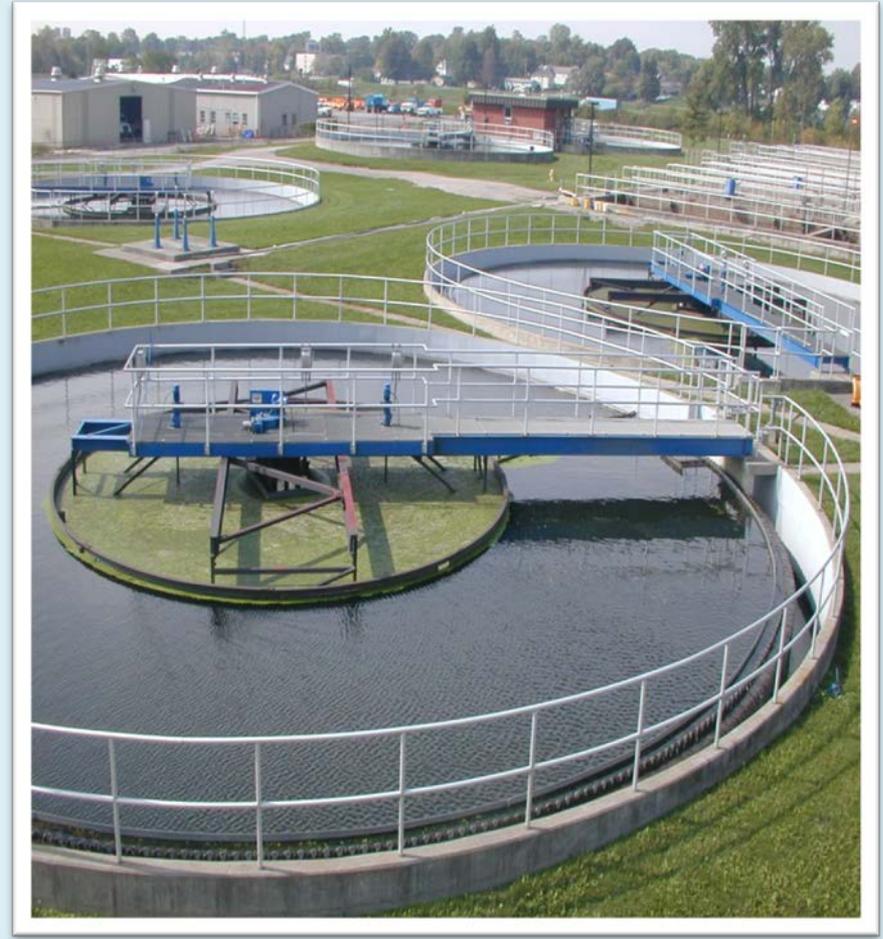

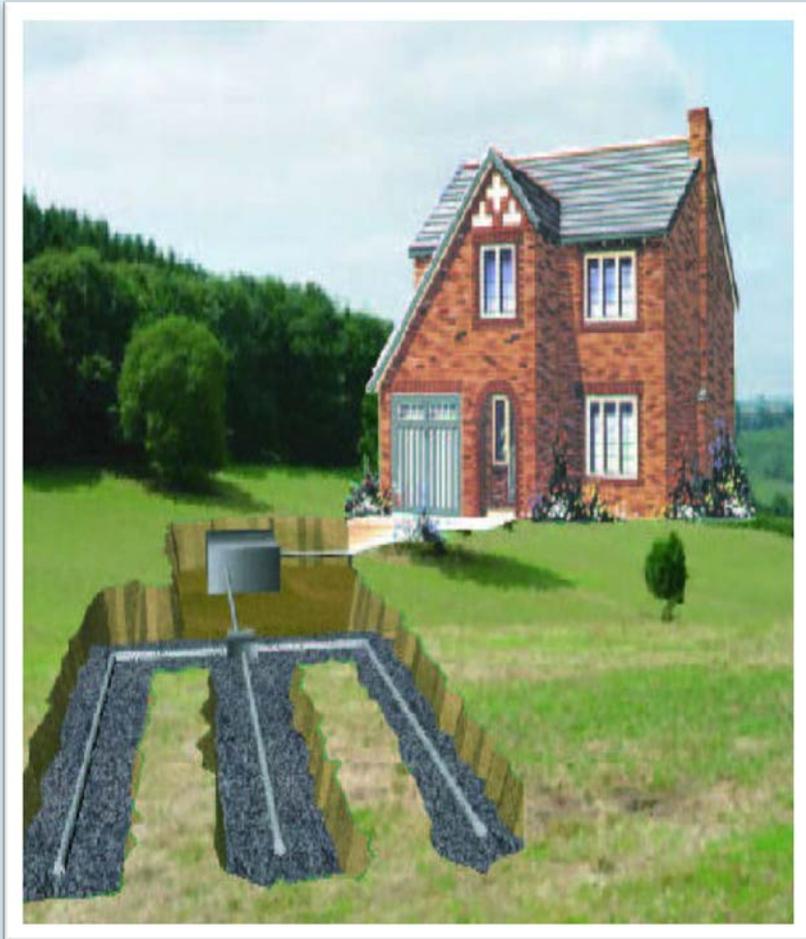

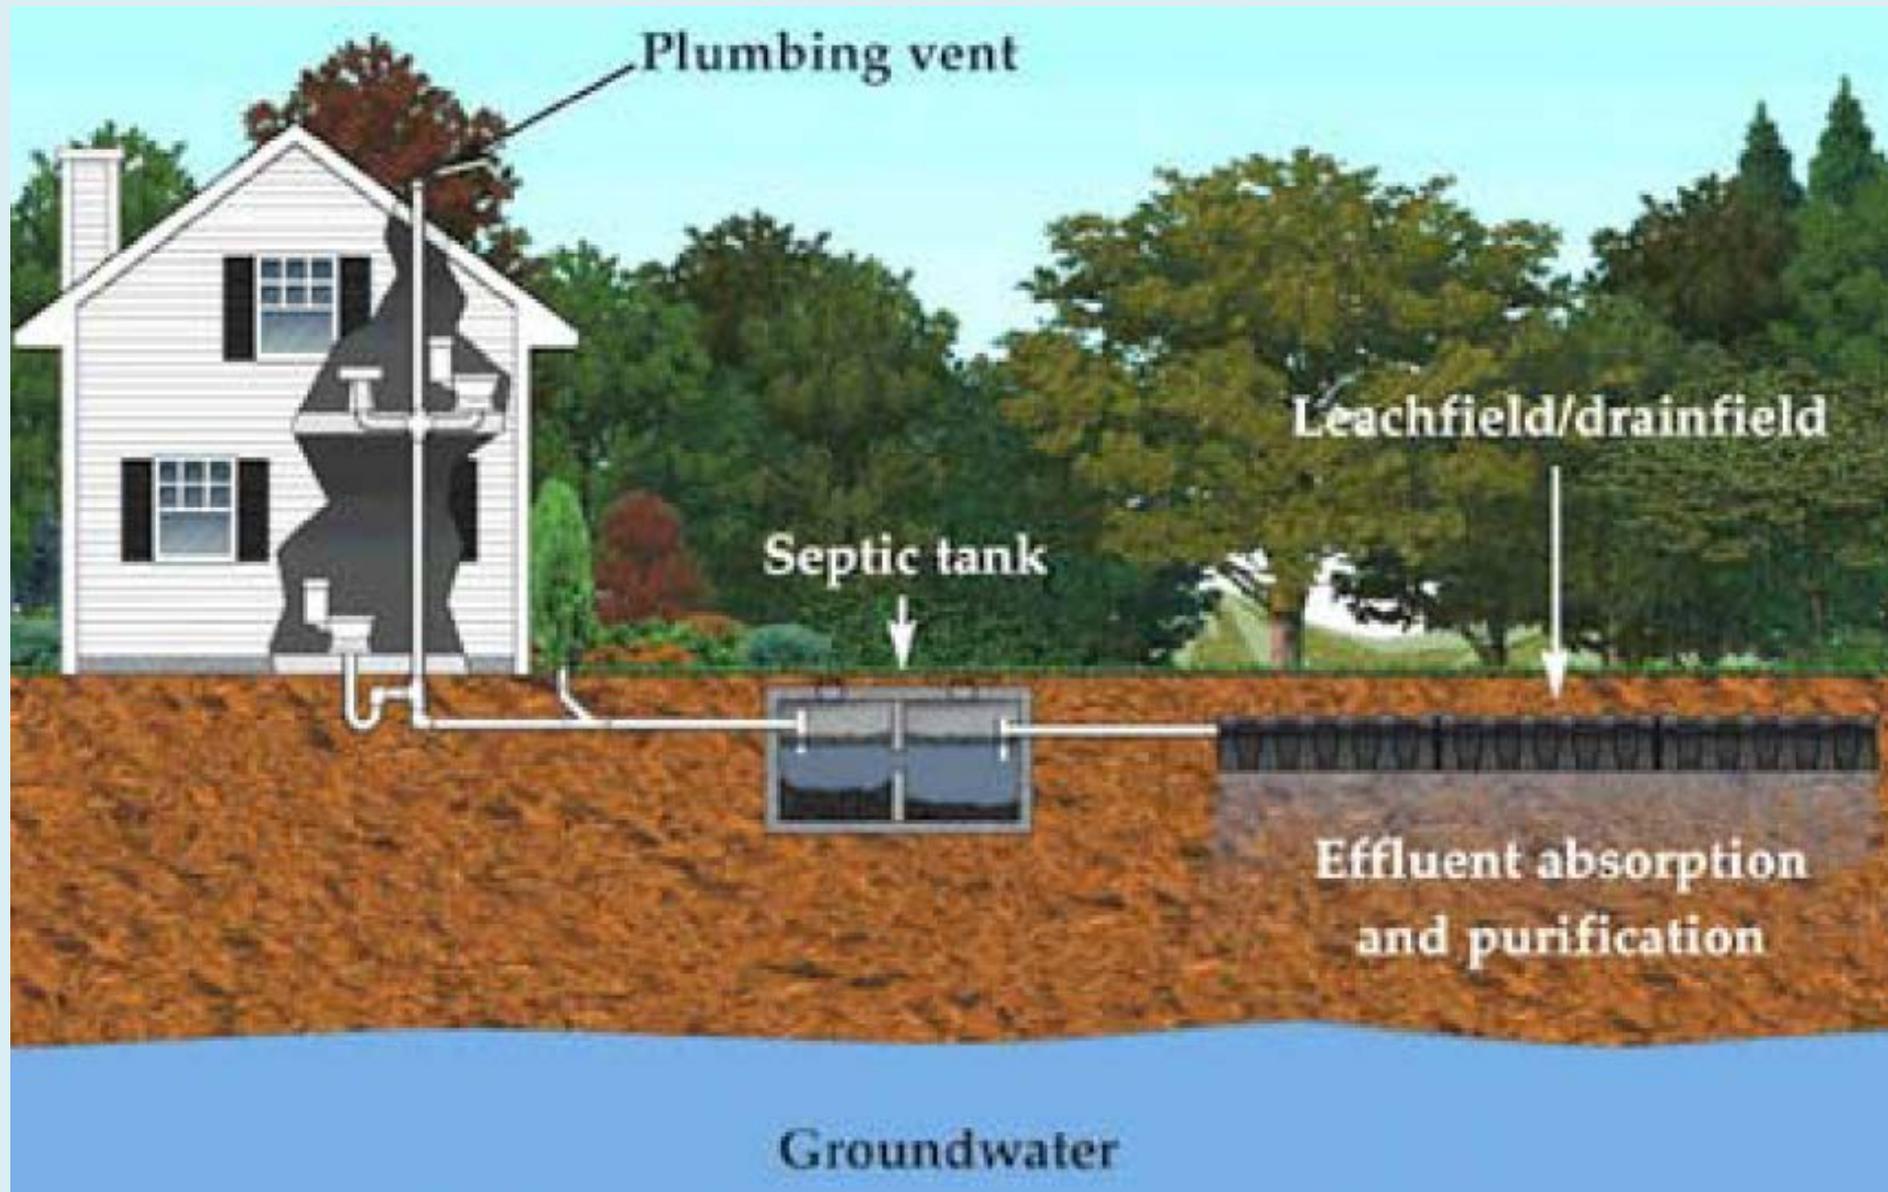

CT 40%

Serve approximately  
1.5 million people in CT

Source: U.S. Census Bureau. 1990

- What is a Septic System?

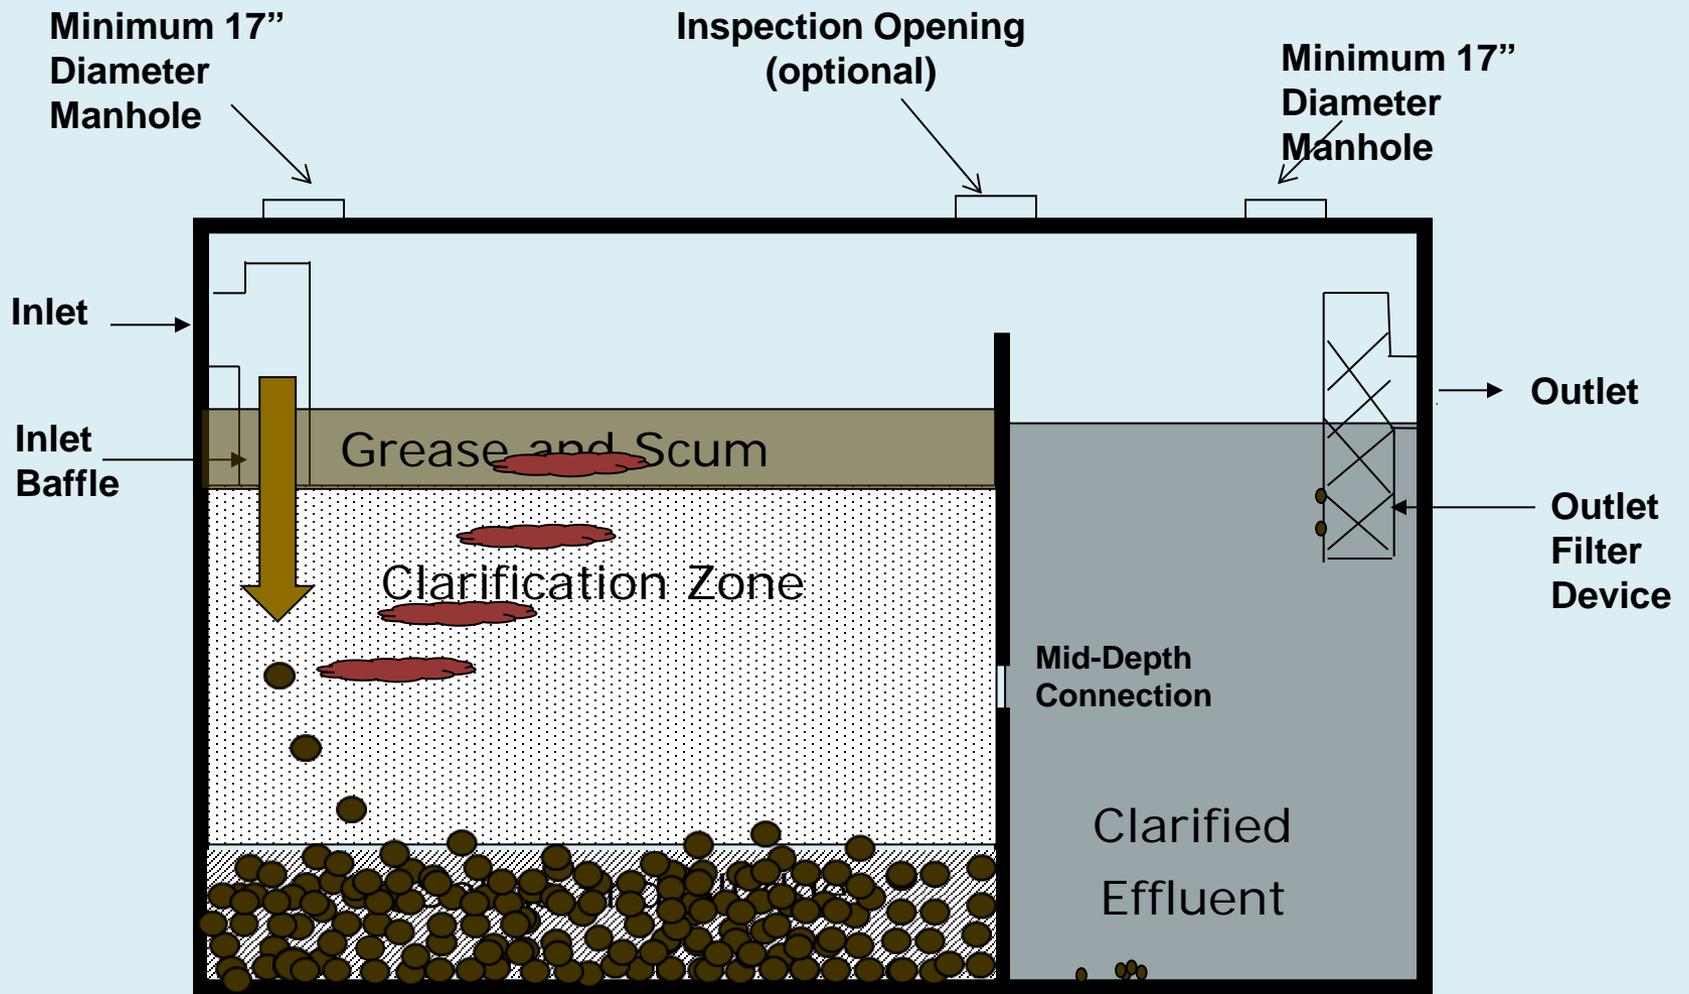

# Septic Tank

- Provides the primary treatment: separates, settles and digests

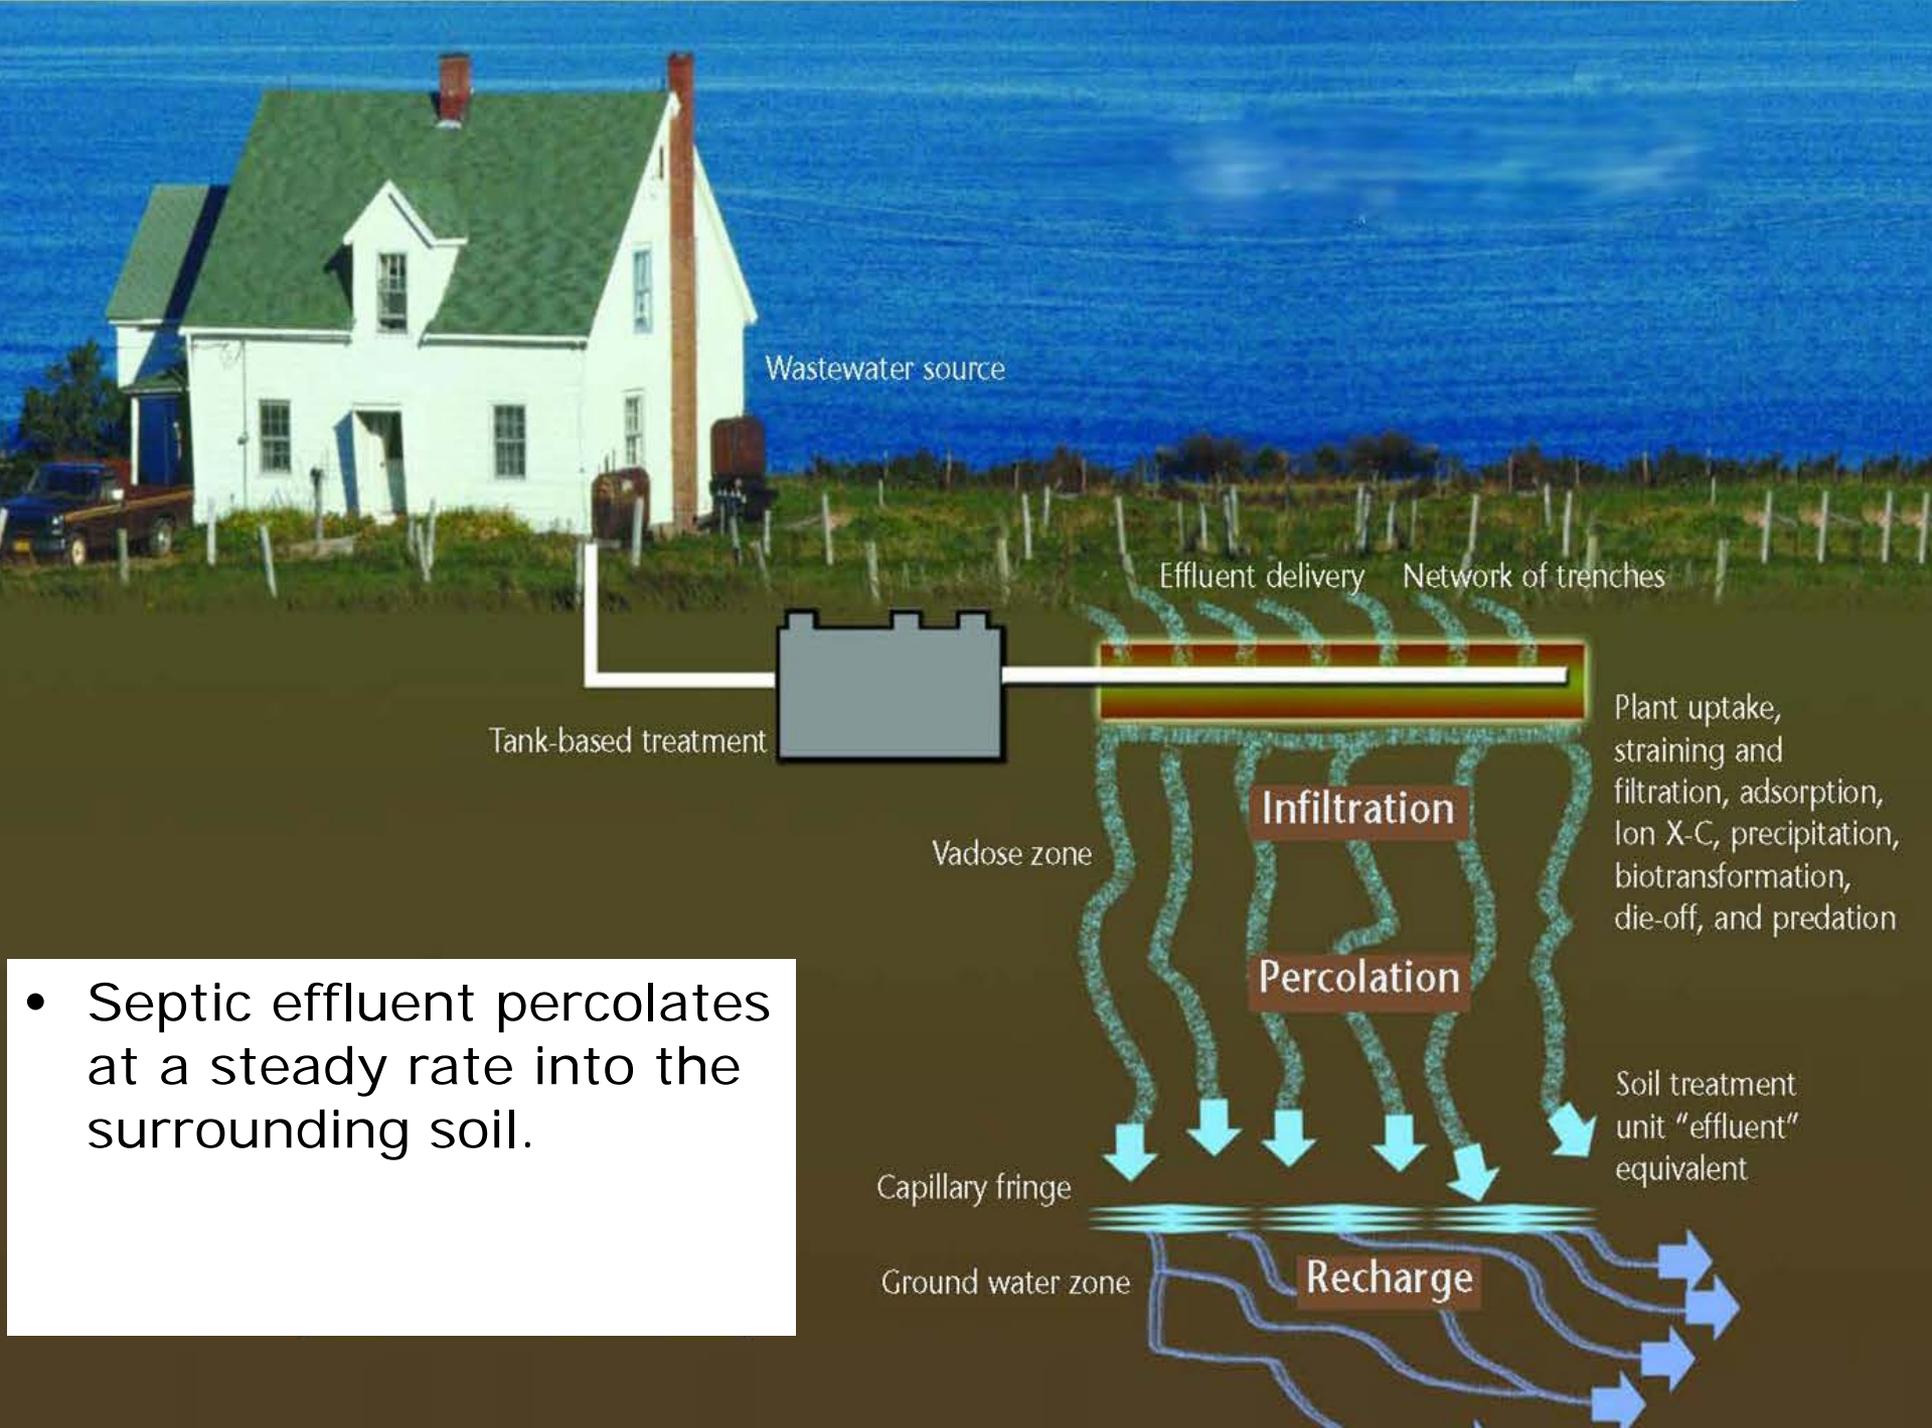

**Two Compartment Septic Tank**

# Septic Tank with Effluent Filter

# Leaching System

- Treat and disperse effluent (liquid from the septic tank) into the surrounding soils without breaking out on the ground surface or polluting the groundwater.
- Must be designed & installed correctly, and not over used.

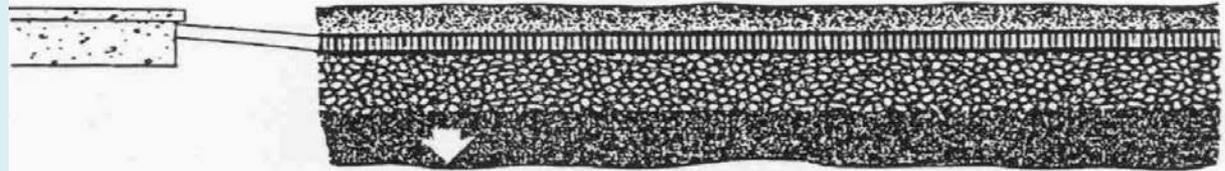

- Septic effluent percolates at a steady rate into the surrounding soil.

# How does a leaching system work?

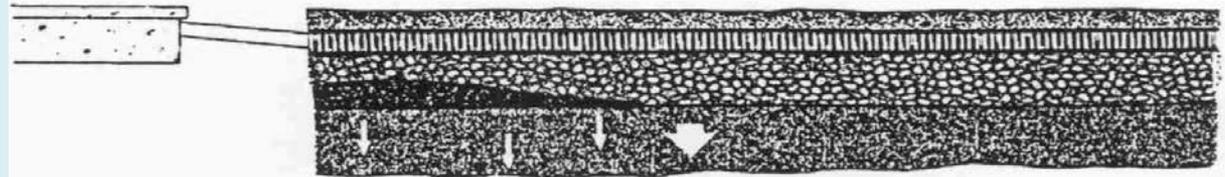

- A biological layer is formed at the soil interface inside the leaching system (Biomat).
- Biomat layer reduces the rate at which sewage passes into the soil.

# Formation of a Biomat (Gravity Distribution)

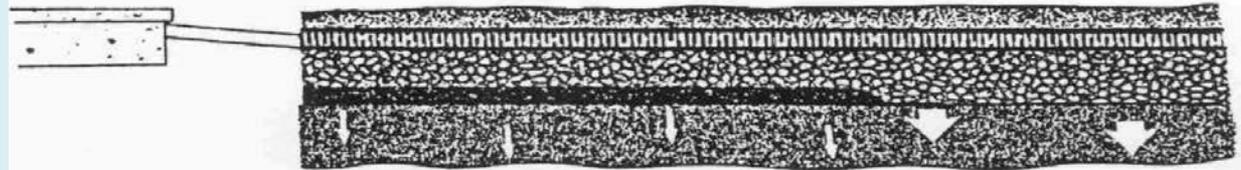

One Day

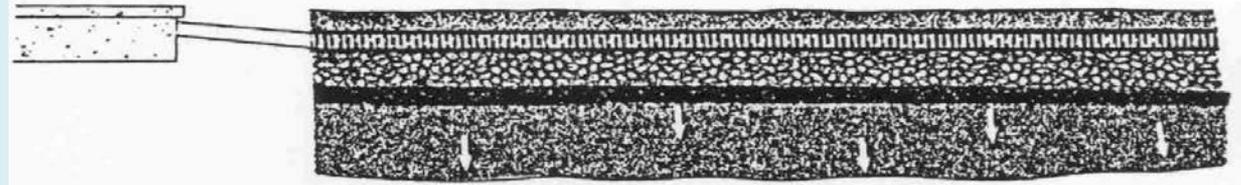

1-3 Month

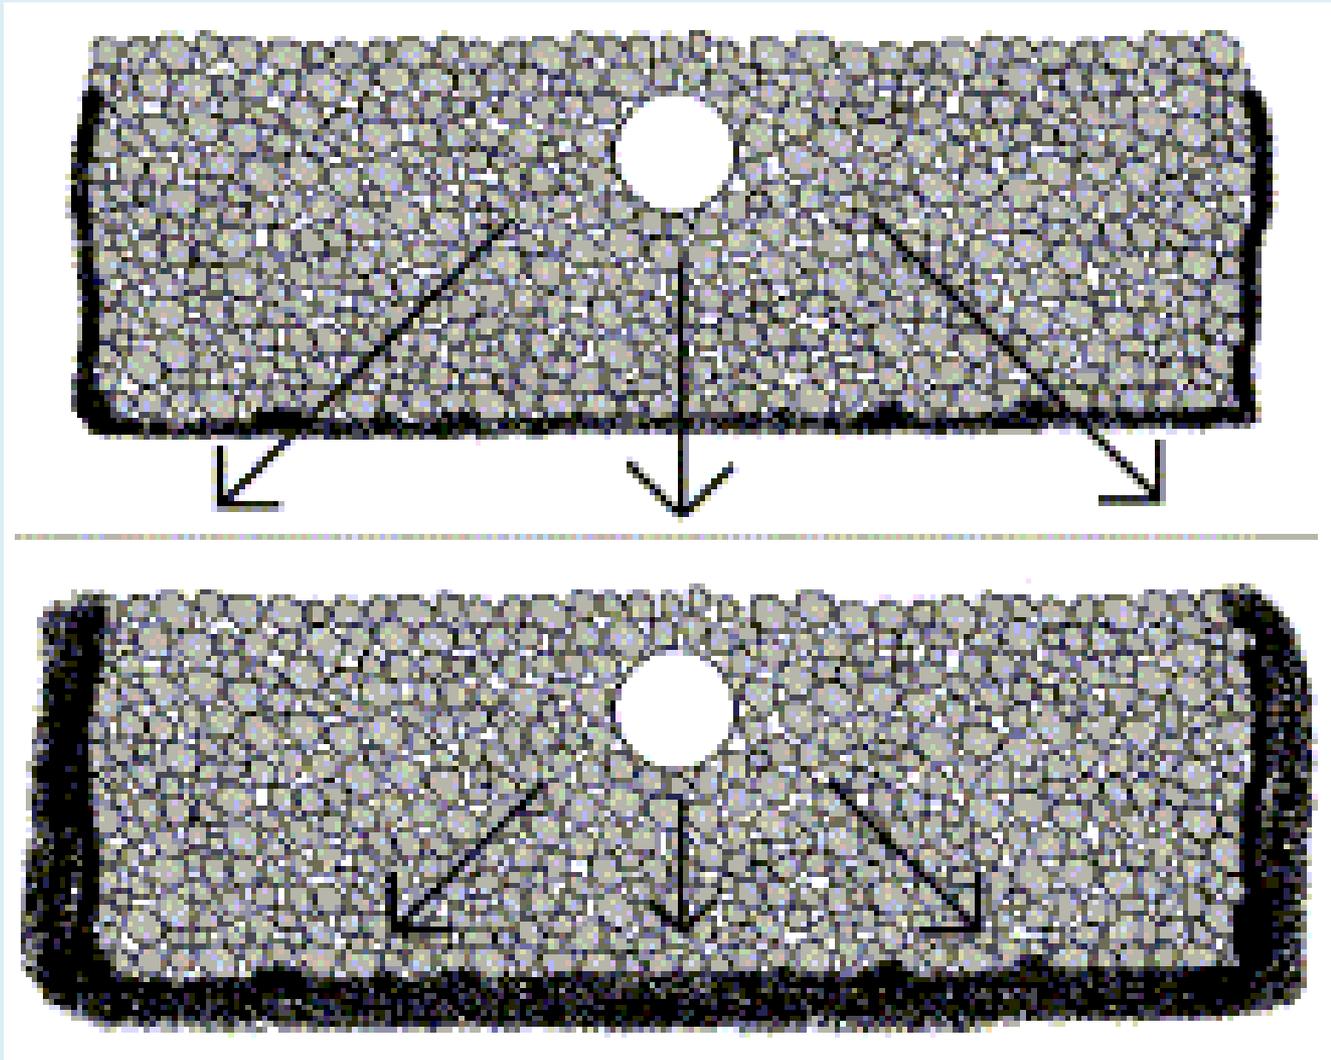

3-6 Months

6 Months-1 Year

# Biomat Growth

# Distribution Piping

# Distribution Box Installed

# Perforated Piping

# Level Distribution System

# Serial Distribution System

# Stone Trenches

# Leaching Pit or Dry Well

# Galleries – 12-inch high

# Galleries – 4' x 4'

# Plastic Leaching Chambers

# Proprietary Systems

# Proprietary Systems

# Proprietary Systems

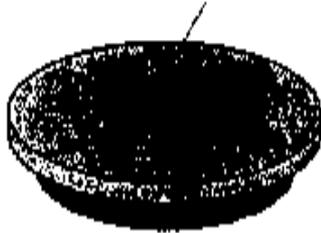

# Proprietary Systems

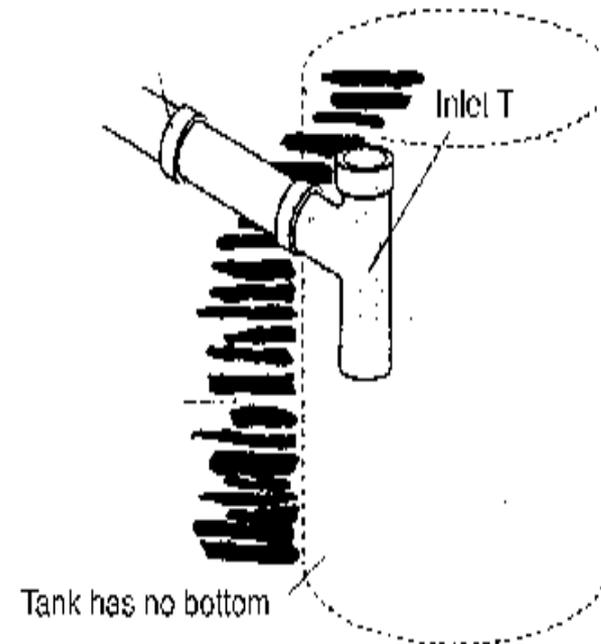

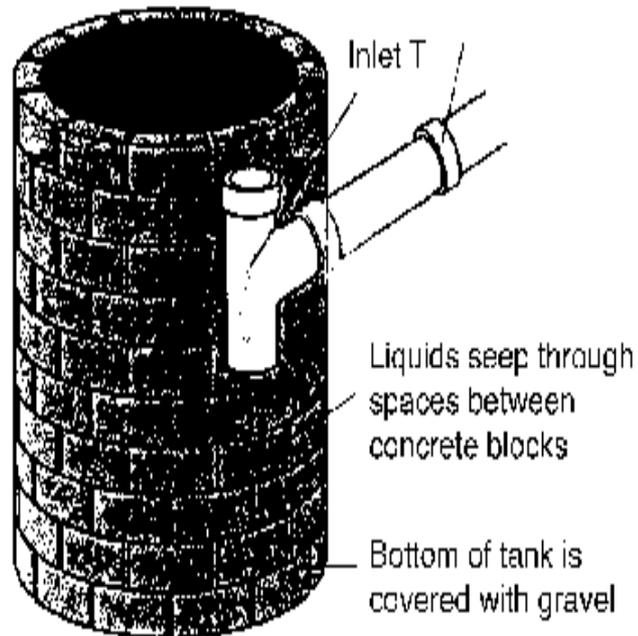

# Cesspools – Not Allowed

Concrete pit cover

Stone pit cover

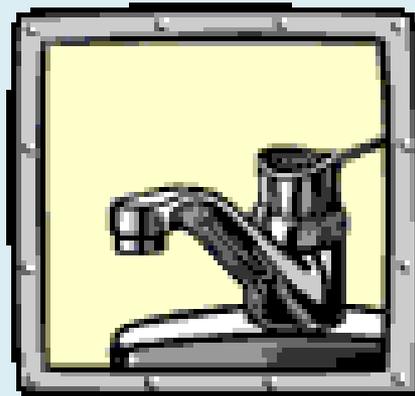

Concrete pit is made of concrete block with uncemented joints

Stone pit has mortarless stone walls

# Cesspools

- Antiquated systems without a septic tank.
- Cesspool abandonment is encouraged and typically occurs at the time of a real estate transaction.
- The Federal Underground Injection Control program required large capacity cesspools that serve multi-family residential building(s), or non-residential buildings serving 20 or more persons per day to be abandoned by April 5, 2005.

# Domestic Sewage?

# Domestic Sewage

- Water from residential uses
  - Toilets
  - Bathing/showers
  - Cooking and cleaning
  - Laundry
- Wastewater from restaurants and commercial buildings

# Domestic Sewage Concerns

- Kitchen wastes – extremely high in fats, oils, and grease
- Wastes from garbage disposal systems contain large amounts of solids
- Laundry wastes high in phosphates, clothing fibers, oils and bacteria shed from the body.

# Pollutants in Domestic Sewage

- Coliform Bacteria
- Suspended Solids
- Biological Oxygen Demand (BOD)
- Nitrogen
- Phosphates

# Biological Oxygen Demand

- measure of the amount of bio-degradable organic material in the wastewater
- High BOD = strong waste (restaurant)
- Low BOD = weak waste (office)

# Biological Oxygen Demand

- Properly functioning septic tank will reduce effluent BOD by about 25 to 30 percent
- Further reduction occurs when the effluent comes in contact with bacterial growth in the leaching system (biomat)

# Nitrogen

- Hazardous to infant children (blue baby disease)
- Septic systems only remove approximately 30% of total nitrogen with the remaining 70% being discharged to the groundwater.

# Phosphates

- Stimulates plant growth (lush green grass or algae growth in surface water)
- Readily removed by filtration through only a foot or two of most soil types

# Chemical Pollutants in Sewage

- Paints, solvents, cleaning chemicals...
- Considered to be hazardous chemicals since they can readily pass thru a septic system and enter the groundwater
- Amount of these chemicals in domestic sewage should be extremely small, if any

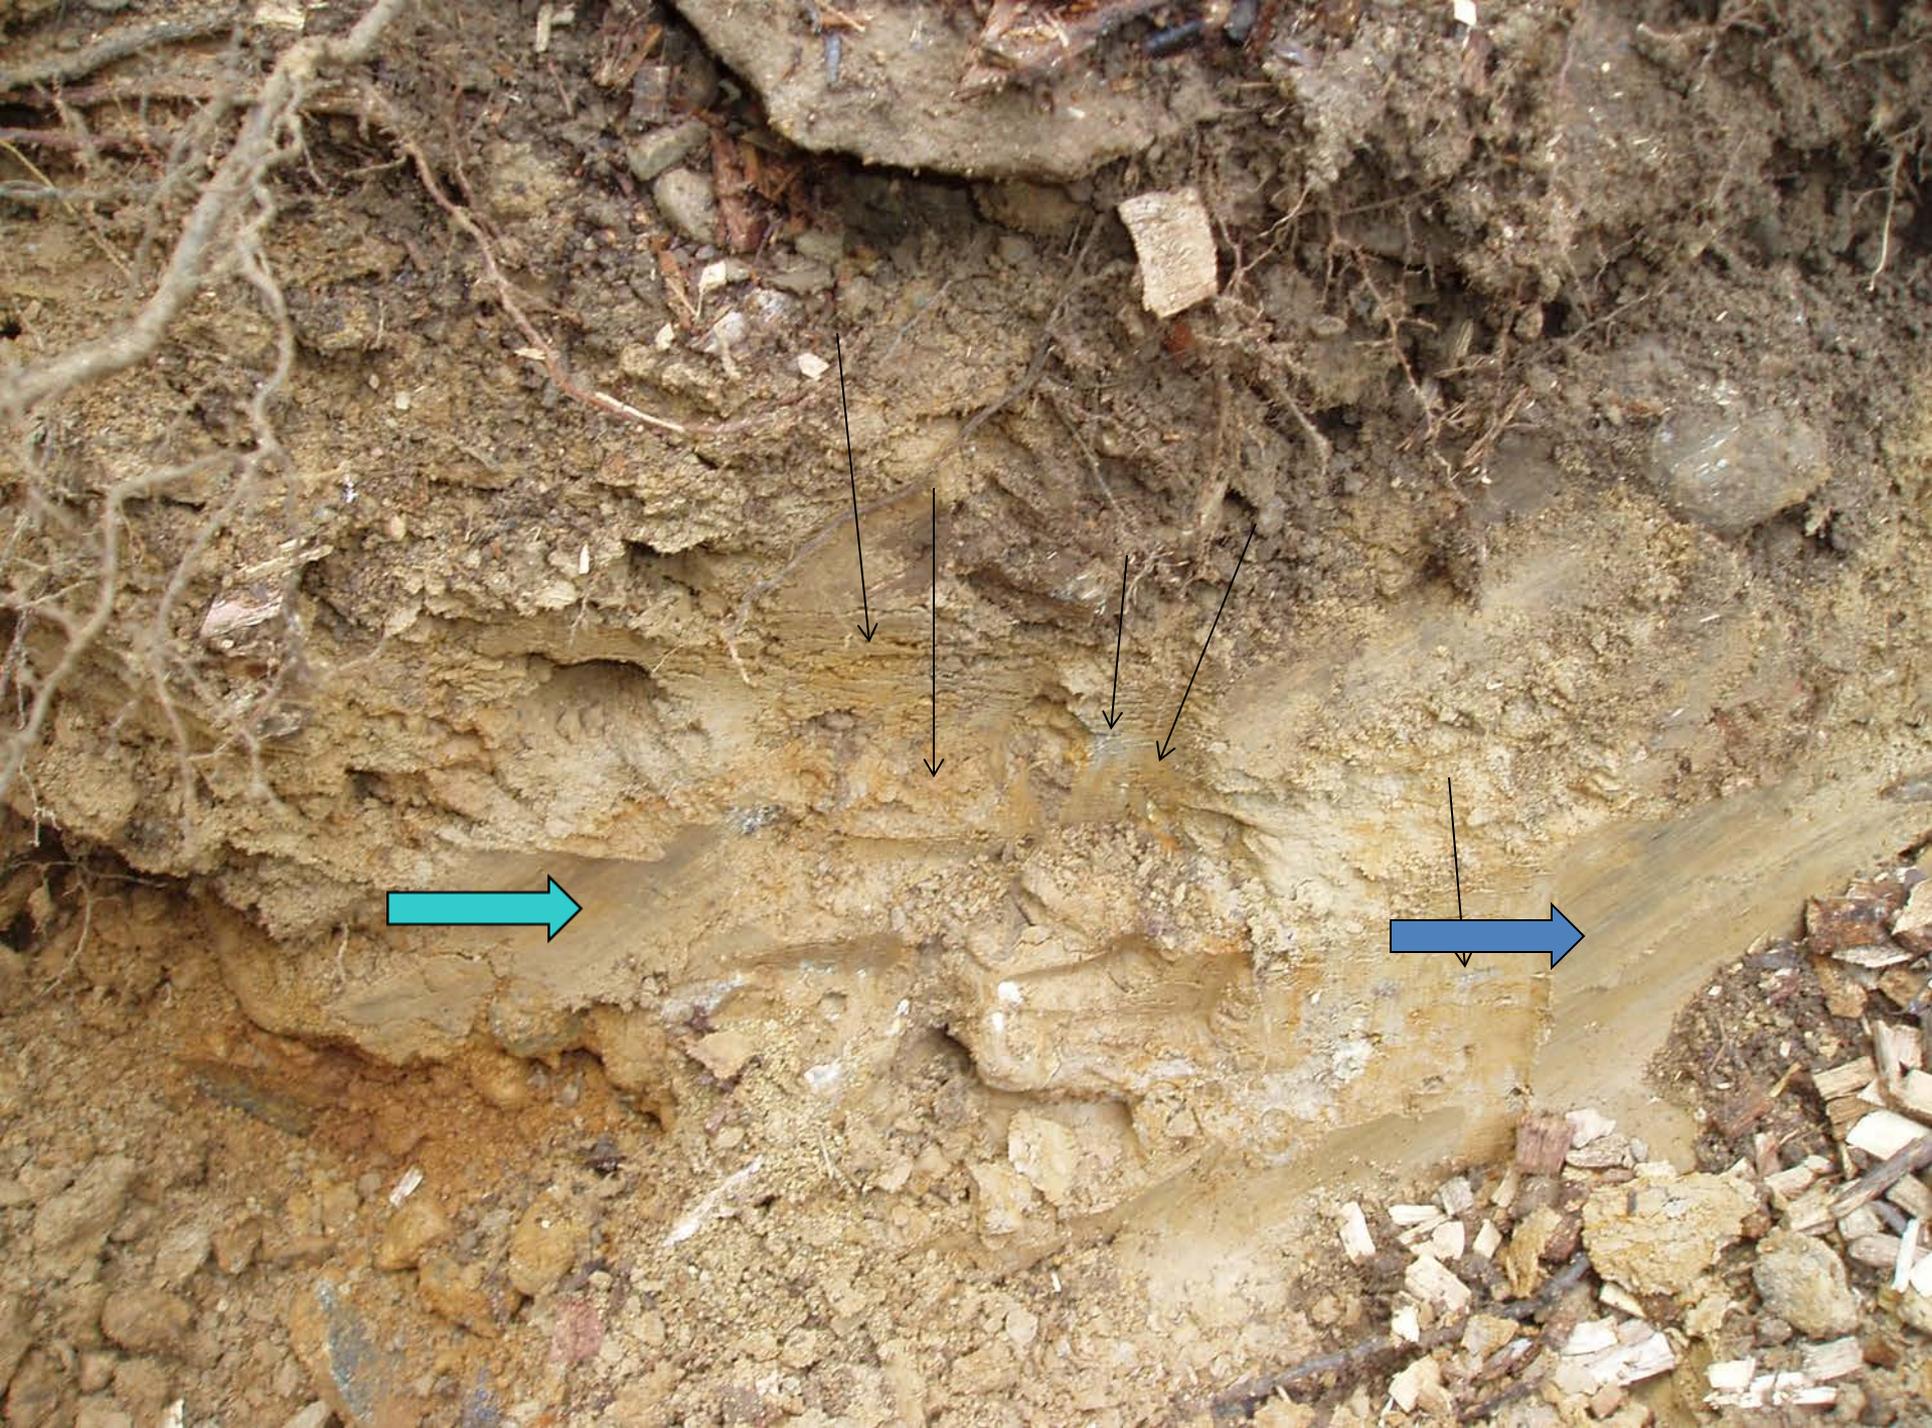

# SITING AND DESIGNING SEPTIC SYSTEMS

# Deep Hole Test Pits

<http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey>

The screenshot displays the Web Soil Survey web application interface. At the top, a browser window shows the URL <http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx>. Below the browser window is a navigation bar with the USDA logo and the text "United States Department of Agriculture Natural Resources Conservation Service". The main navigation menu includes "Contact Us", "Subscribe", "Archived Soil Surveys", "Soil Survey Status", "Glossary", "Preferences", "Link", "Logout", and "Help". A secondary menu contains "Area of Interest (AOI)", "Soil Map", "Soil Data Explorer", "Download Soils Data", and "Shopping Cart (Free)".

The main content area is divided into two panels. On the left is a "Search" panel with a "Legend" tab and a "Quick Navigation" list:

- Area of Interest
- Import AOI
- Quick Navigation
  - Address
  - State and County
  - Soil Survey Area
  - Latitude and Longitude
  - PLSS (Section, Township, Range)
  - Bureau of Land Management
  - Department of Defense
  - Forest Service
  - National Park Service
  - Hydrologic Unit

On the right is the "Area of Interest Interactive Map" panel. It features a toolbar with icons for search, zoom, pan, and other map functions. Below the toolbar are "View Extent" (set to "Contiguous U.S.") and "Scale" (set to "not to scale"). The map itself shows a satellite-style view of the United States with state boundaries and two-point AOI markers.

Map Unit Legend

State of Connecticut (CT600)

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
3	Ridgebury, Leicester, and Whitman soils, 0 to 8 percent slopes, extremely stony	3.2	5.0%
46B	Woodbridge fine sandy loam, 0 to 8 percent slopes, very stony	1.9	3.0%
47C	Woodbridge fine sandy loam, 2 to 15 percent slopes, extremely stony	1.7	2.6%
50B	Sutton fine sandy loam, 3 to 8 percent slopes	2.7	4.1%
51B	Sutton fine sandy loam, 2 to 8 percent slopes, very stony	16.3	25.5%
60B	Canton and Charlton soils, 3 to 8 percent slopes	5.8	9.1%
60C	Canton and Charlton soils, 8 to 15 percent slopes	0.6	0.9%
61B	Canton and Charlton soils, 3 to 8 percent slopes, very stony	5.2	8.0%
73C	Charlton-Chatfield complex, 3 to 15 percent slopes, very rocky	23.7	36.9%
73E	Charlton-Chatfield complex, 15 to 45 percent	1.5	2.3%

Soil Map

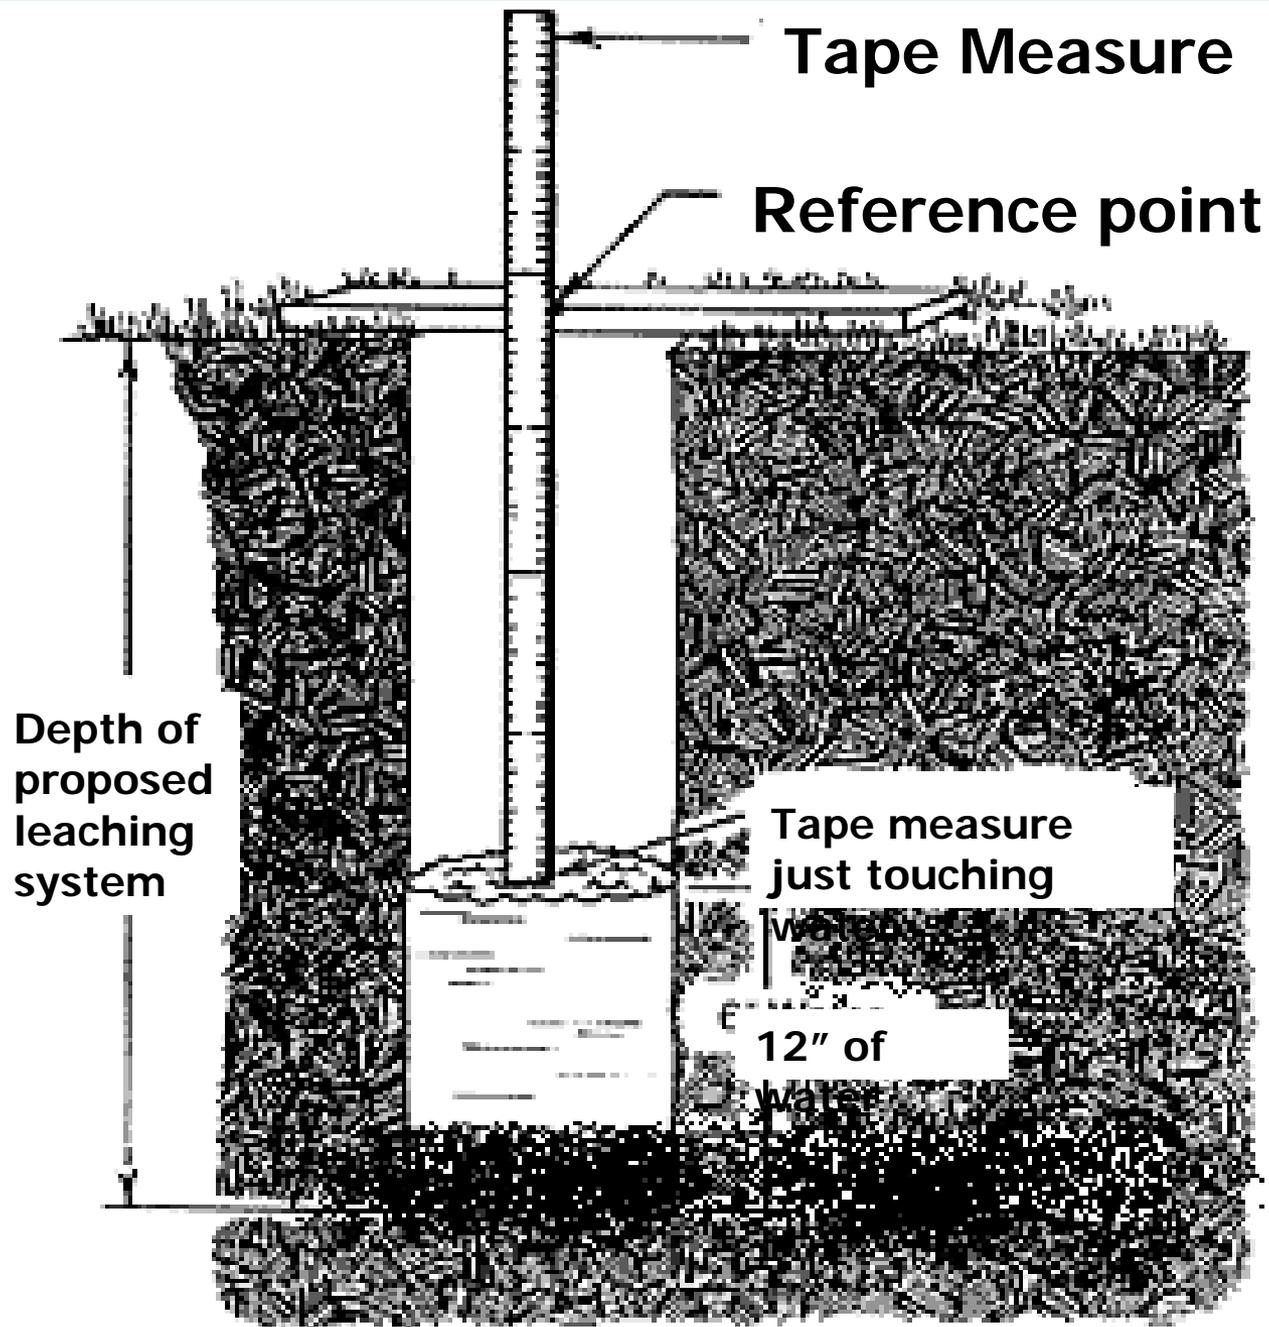

Legend | Scale: (not to scale)

**Warning: Soil Map may not be valid at this scale.**  
 You have zoomed in beyond the scale at which the soil map for this area is intended to be used. Mapping of soils is done at a particular scale. The soil surveys that comprise your AOI were mapped at 1:12,000. The design of map units and the level of detail shown in the resulting soil map are dependent on that map

# Percolation Test

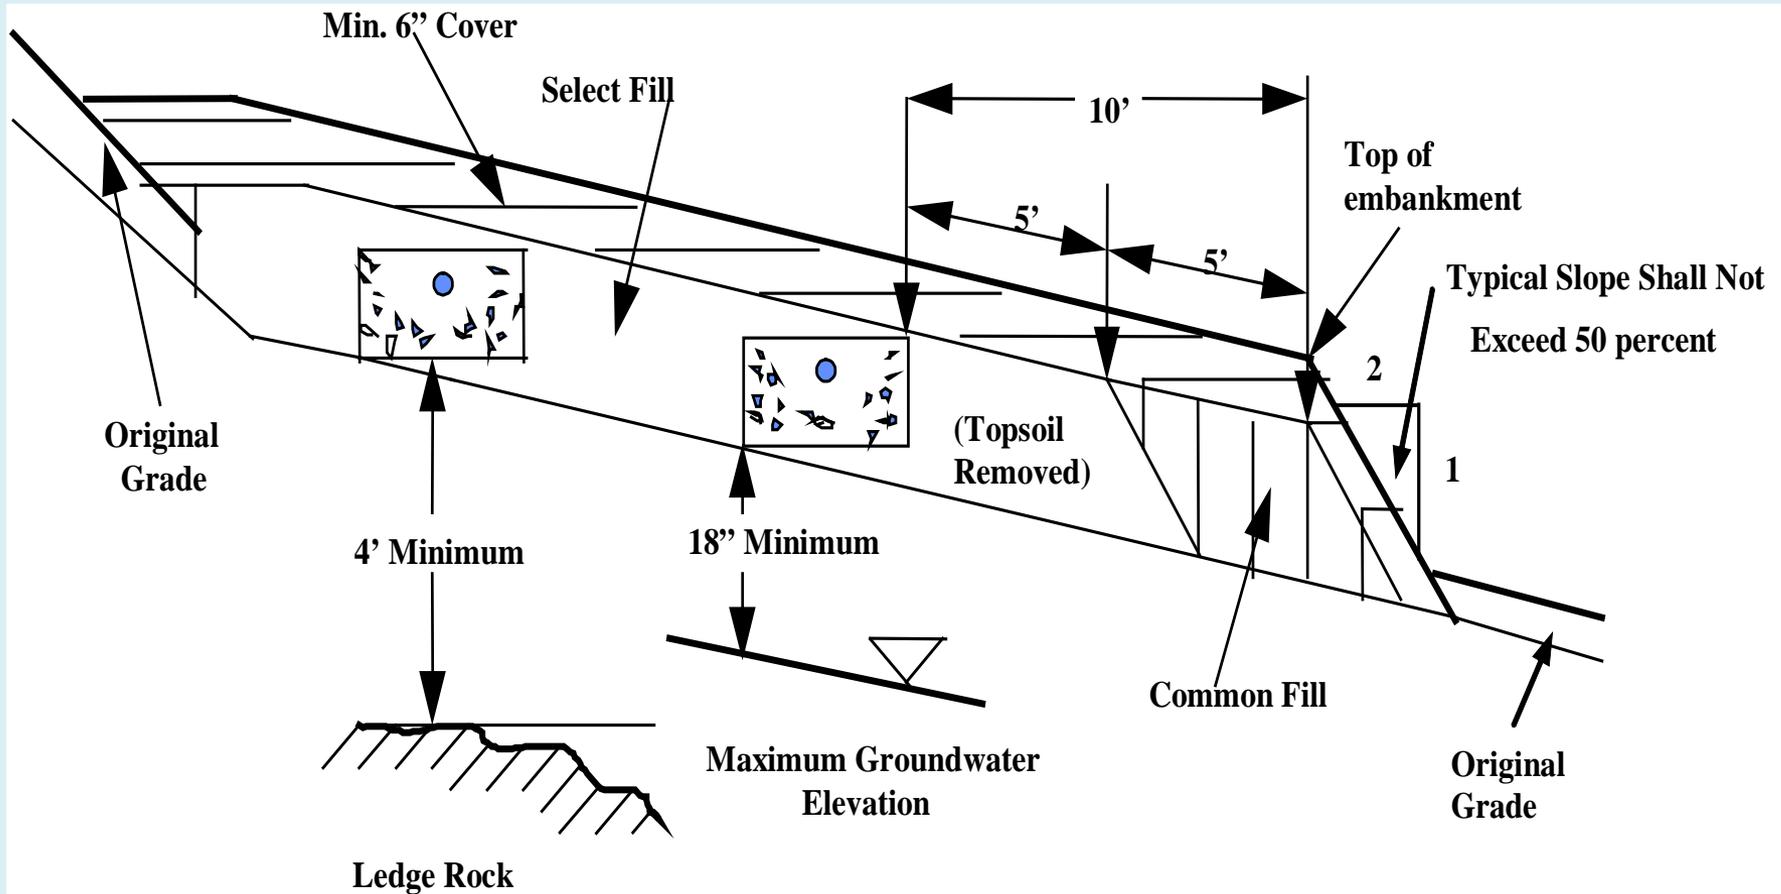

# Vertical Separation Distances in CT

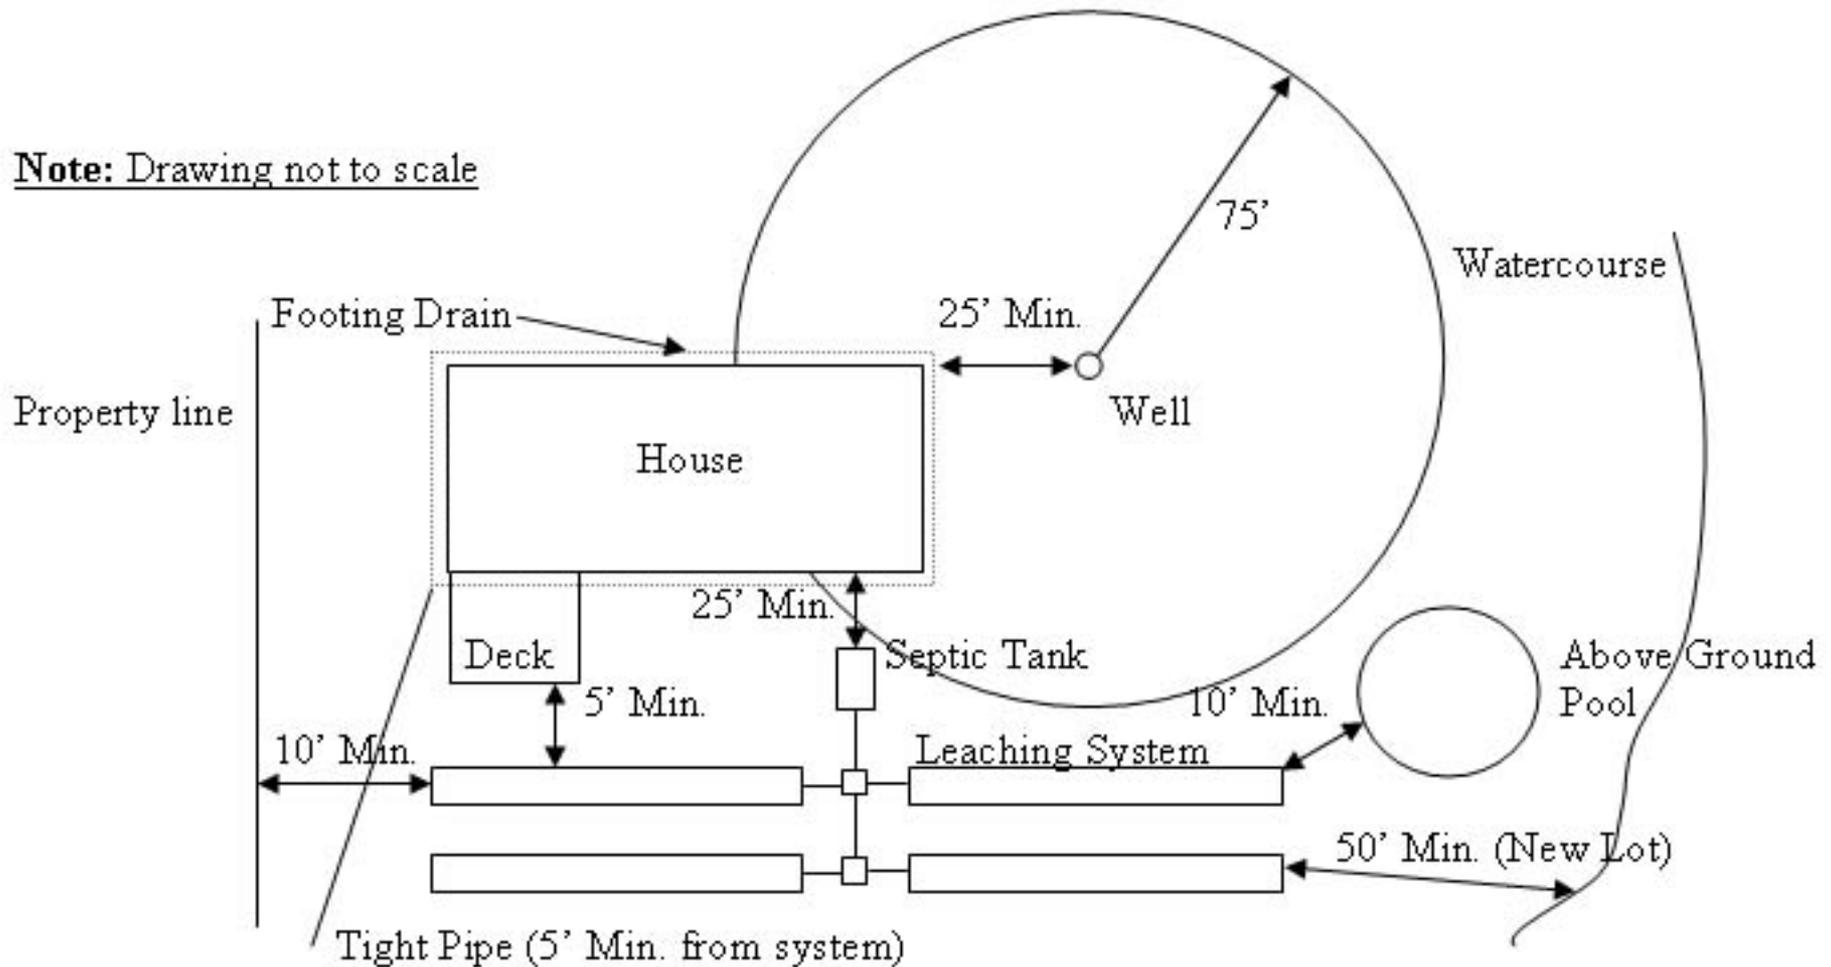

- Bottom of a leaching system must be a minimum:
  1. 18 inches above the groundwater table (24 inches if a >2000 gpd)
  2. 48 inches above ledge rock

# Cross-section of a leaching system

# Horizontal Separation Distances

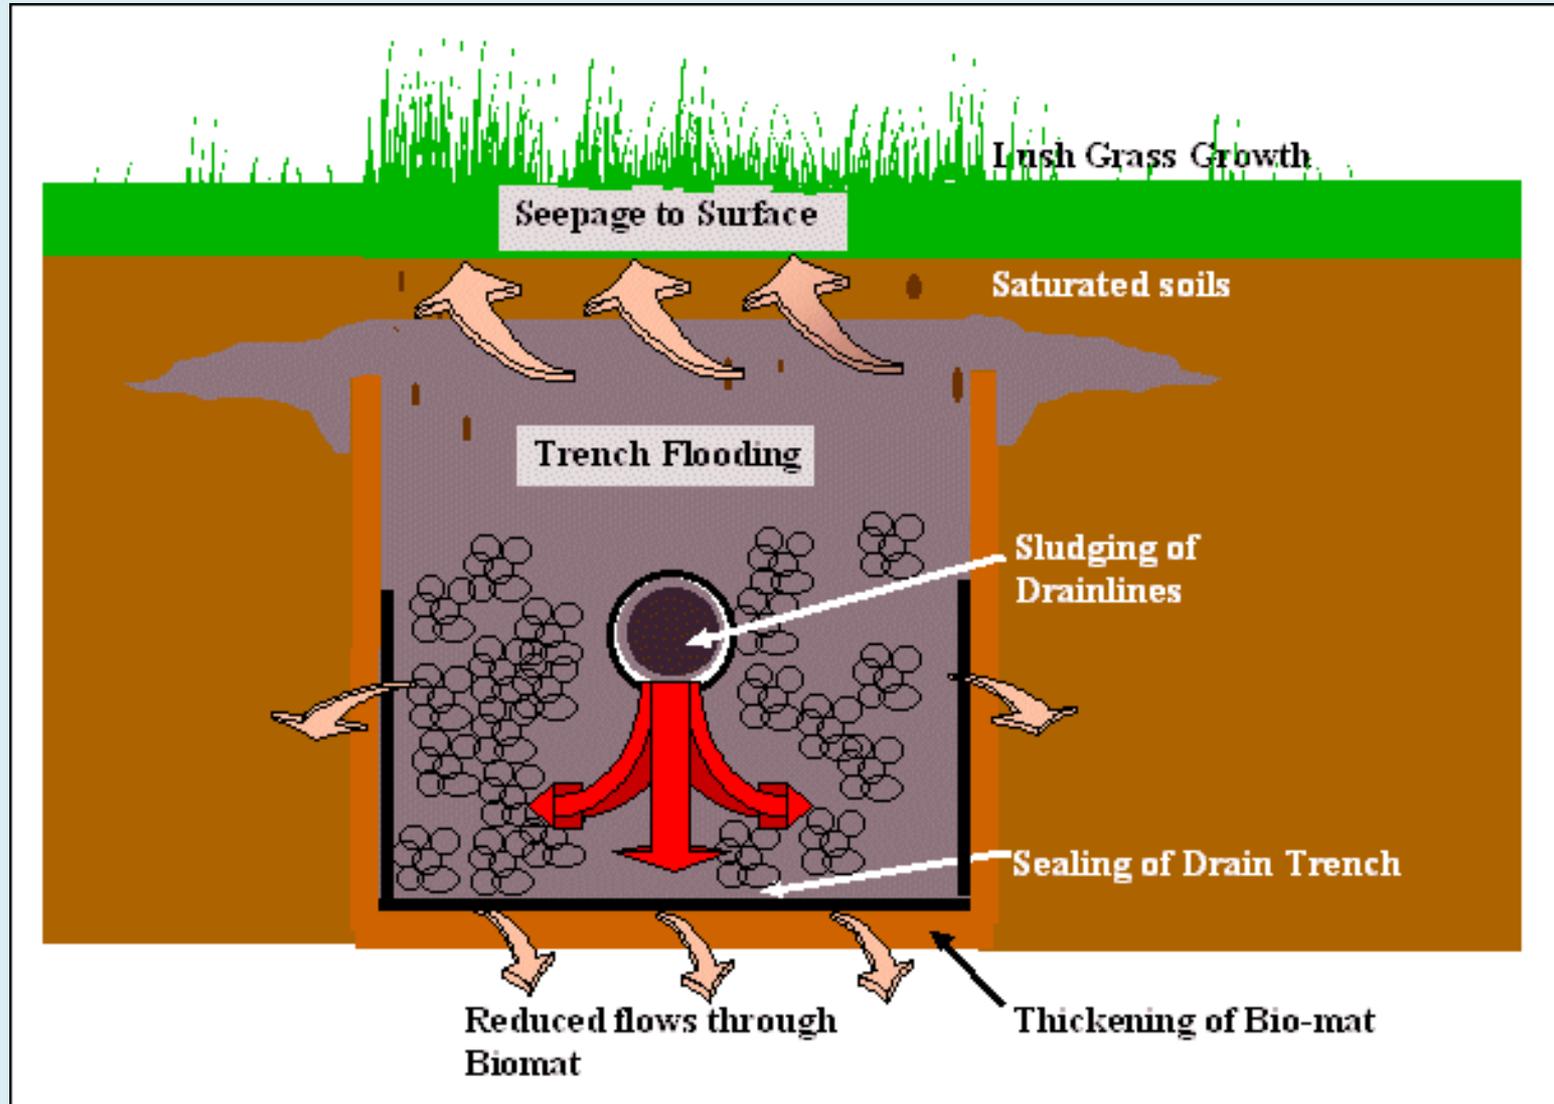

Note: Drawing not to scale

# Why do Septic Systems fail?

# Age of system

# User habits

# User habits

# Improper maintenance

# Improper maintenance

## Homeowner Abuse

Use of chemical additives promoted to keep a septic system “healthy,” “free-flowing,” or “nourished”

*Avoid costly septic problems! **BLASTO** Septic System Additive uses natural enzyme action to dissolve organic waste throughout your septic system, helping to keep waste lines clear and your septic tank “trouble-free”*

# Improper site evaluation

# Improper installation

# Improper installation

# Illegal connections

# How to identify a failing septic system?

# SIGNS OF SEPTIC PROBLEMS

- Breakouts to surface
- Back-ups into building
- Sewage odors
- Lush green grass
- High bacteria counts

# Failing or Malfunctioning?

- Failing: breaking out onto the surface, discharging to watercourse, or causing health hazards
- Malfunctioning: high levels in the septic tank, backing up into building – further assessment

# Problems Associated With Failing Systems

- Overflowing septic systems release bacteria and nutrients into the water cycle
- Contaminate nearby lakes, streams, estuaries, and ground water

(C) 2007-1991 Daniel Friedman

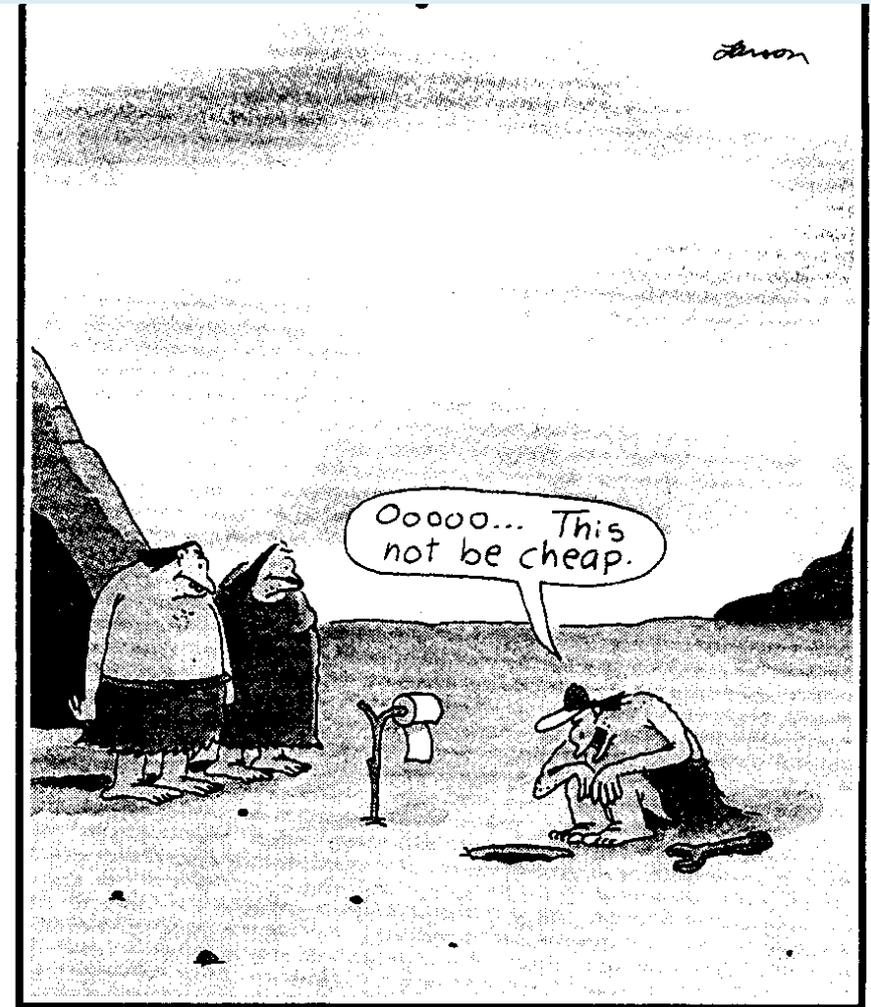

(C) 2006-1991 Daniel Friedman

# Why do people avoid fixing their system?

~~Early plumbers~~

Early Septic Installer

# Who to contact?

- Property owner
- Local Health Department (can issue orders)
- DEEP if large system (>5000gpd)

# State of Connecticut

## Local Health Departments and Districts

### July 2014

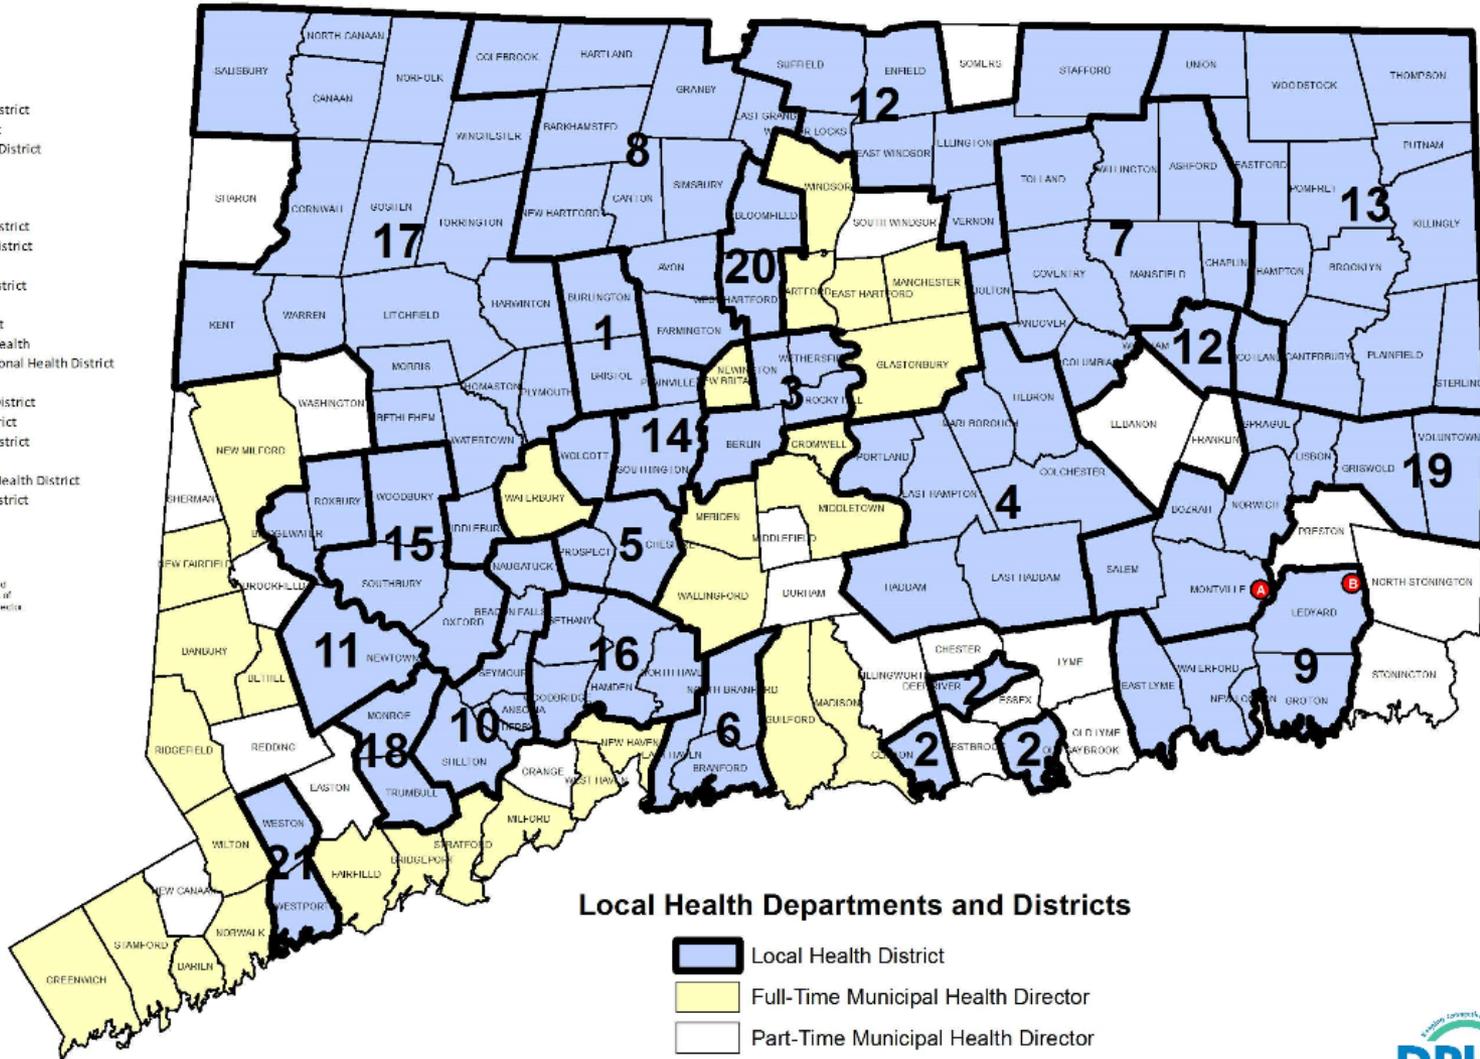

#### Health Districts<sup>1</sup>

- 1 Bristol-Burlington Health District
- 2 CT River Area Health District
- 3 Central Connecticut Health District
