

Connecticut Department of Public Health

Radon Program

List of Radon Measurement Professionals

The following list contains the names of individuals and companies who have been trained according to U.S. Environmental Protection Agency radon measurement protocols. These individuals or companies also maintain certification from one of the two National Radon Proficiency Programs; (1) The National Environmental Health Association (NEHA) and (2) the National Radon Safety Board (NRSB).

The State of Connecticut, Department of Public Health (CT DPH) is required under Connecticut General Statute §19a-14b, to “maintain a list of companies or individuals that are included in current lists of National Radon Proficiency Programs.” The CT DPH cannot be responsible for the knowledge or experience of providers of services, nor for their fees or business practices. Inclusion on this list does not constitute an endorsement or a recommendation of the firms. People are encouraged to take normal business precautions before selecting a professional.

Radon Measurement Professionals:

There are two types of radon measurement professionals listed on the following pages:

1. *Analytical Service Providers:* These companies or individuals have *their own analysis capabilities* for radon measurement. Typically, the listed individual or company is:
 - An analytical laboratory that sells test kits (passive devices) to residential measurement service providers or homeowners, and analyzes and reports the results of testing to a residential measurement service provider or homeowner; or
 - A company or individual that utilizes a radon measurement device (a *continuous radon monitor or electret ion chamber*) that allows for the direct measurement and reporting of radon in a home without the services of an analytical laboratory (analytical service provider).
2. *Residential Measurement Service Providers:* These companies or individuals offer radon measurement services to consumers including, but not limited to, radon detector placement, home inspection, and consultation. These individuals or companies do not have the ability to directly analyze radon in a home, and typically submit the radon test kits to an “Analytical Service Provider,” as described above.

Overview of Testing Devices for Radon In Air

There are several devices available that can be used to measure radon in air. The measurement of radon in homes requires a minimum time period of 48 hours for testing, preceded by 12 hours of closed house conditions (as required by the U.S. EPA). The following is a brief overview of these devices:

1. *Passive devices* do not require power to operate. A residential measurement service provider or analytical measurement service provider may be hired to conduct testing using these devices. It is recommended that you hire a trained technician for placing and retrieving devices.

Short Term (testing period is 2-90 days)

AC: Activated Charcoal Adsorption

LS: Charcoal Liquid Scintillation

ES: Electret Ion Chamber: short term

Long Term (testing period is 91 days to 1 year)

AT: Alpha-Track Detection

UT: Unfiltered Alpha Track

EL: Electret Ion Chamber: long term

2. *Active devices* require power to operate. A trained technician should be hired in order to ensure accurate radon testing results. The most commonly used active devices are listed below:

CR: Continuous Radon Monitoring

CW: Continuous Working-Level Monitoring

Water Services:

Radon measurement professionals listed on the following pages, are qualified to collect water samples for radon analysis. Water samples collected by radon measurement professionals must be submitted to a laboratory approved by the CT DPH Environmental Laboratory Certification Program. Please refer to our list of laboratories that are approved to analyze radon in water. Water analysis results reported by laboratories that are not approved by the CT DPH are not considered valid. Reliable and precise radon-in-water results are dependent on (1) the proper collection of a water sample, and (2) the analysis of the water sample by a CT DPH approved laboratory. The decision to reduce radon in your water should be based on the average of two valid water sample results.

List of Companies or Individuals that Offer Radon Measurement Services

Last updated February 10, 2009

Name of Company:	City/Town	State	Telephone	Individuals listed by NEHA/NRSB	Radon Measurement Services Offered	
					Short-Term Testing	Long-term Testing
A & R Environmental, LLC	Andover	CT	860-742-6767	Al Bonner, Joshua Clark, Jordan Clark	CR, ES	
AA-MSA	East Haven	CT	800-888-8107	Joseph Raffone	AC, ES, CR, CW, GC	EL
A. Douglas Thibodeau, LLC	Marlborough	CT	860-978-1513	A. Douglas Thibodeau	AC, LS, ES, CR	AT, EL
