Inhaled Bronchodilators
Inhaled bronchodilators relax tight airways (bronchoconstriction). Bronchodilators treat the noisy part of asthma: coughing, wheezing, choking and shortness of breath.

Short-Acting Inhaled Bronchodilators (Lasts 3-6 hours)

- **Albuterol** generic
- **Albuterol Sulfate HFA** albuterol sulfate HFA
- **Alupent®** metaproterenol sulfate
- **Atrovent® HFA** ipratropium bromide HFA

Long-Acting Inhaled Bronchodilators (Lasts 12 hours)

- **Foradil® Aerolizer®** formoterol fumarate inhalation powder
- **Serevent® Diskus®** salmeterol xinafoate inhalation powder

Combination Medications
Combination medications contain both long-acting bronchodilator and inhaled corticosteroid components.

- **Advair Diskus® 100/50** fluticasone propionate and salmeterol inhalation powder
- **Advair Diskus® 250/50** fluticasone propionate and salmeterol inhalation powder
- **Advair Diskus® 500/50** fluticasone propionate and salmeterol inhalation powder

Inhaled Anti-Inflammatories
Inhaled corticosteroids and other anti-inflammatories reduce and prevent airway inflammation (swelling). Used daily, anti-inflammatories treat the underlying part of asthma that you may not feel or see.

- **Asmanex® Twisthaler®** 220 mcg mometasone furoate inhalation powder
- **Azmacort®** triamcinolone acetonide
- **Flovent® HFA 44 mcg** fluticasone propionate HFA
- **Flovent® HFA 110 mcg** fluticasone propionate HFA
- **Flovent® HFA 220 mcg** fluticasone propionate HFA
- **Intal®** cromolyn sodium
- **Pulmicort Turbuhaler®** budesonide inhalation powder
- **QVAR® 40 mcg** beclomethasone dipropionate HFA
- **QVAR® 80 mcg** beclomethasone dipropionate HFA
