## Key Findings

---

- Asthma prevalence rates among Connecticut public school students were 13.2% for school year 2006-2007, 13.2% for school year 2007-2008, and 13.1% for school year 2008-2009.
- Asthma prevalence rates were higher among students in grade PK or K when compared to the students in grades 6 or 7, and grade 9, 10, or 11. This difference was less apparent for school year 2008-2009, where the asthma rates were 14.4% among students in grade PK or K, 13.5% in grade 6 or 7, and 12.2% in grade 9, 10 or 11.
- Asthma prevalence rates were higher among male students when compared to female students. For school year 2008-2009, the asthma rates were 14.5% among male students and 11.6% among female students.
- In regard to asthma prevalence rates by race/ethnicity, Hispanic students had the highest rates of asthma followed by black students, other race/ethnicity students, and white students. For school year 2008-2009, the asthma rates were 16.9% among Hispanic students, 14.8% among black students, 12.2% among students of other race/ethnicity, and 10.6% among white students. Please note that about 8.8% of students were reported as having an unknown race/ethnicity category; therefore, asthma prevalence rates by race/ethnicity groups could potentially be underestimated.
- District Reference Groups (DRG), with letters A to I, classify school districts of similar socioeconomic status (SES). In general, SES decreases with each letter from A to I, and asthma rates increased with decreasing SES. Four of the five largest cities (Bridgeport, Hartford, New Haven, and Waterbury) belonged to group I, which had the highest asthma rates. For school year 2008-2009, the asthma rates ranged from 7.4% among students in DRG A to 19.2% among students in DRG I.
- In public and private schools, the majority of asthma cases were reported as mild. In general, the percentage of students with exercise induced asthma increased as grade increased.
- Males consistently showed higher percentages of mild asthma while females showed higher percentages of exercise induced asthma.
- In general, the percent of students with mild asthma was highest among whites, while the percent of students with moderate asthma was highest among blacks. Exercise induced asthma was more prevalent in white students than black and Hispanic students.
- About three out of every four students had an asthma diagnosis from Health Assessment Record; one out of every three students had asthma medication on file; and one out of every twenty students had an Asthma Action Plan on file.

# Introduction

---

Pursuant to Connecticut General Statute (CGS) Section 10-206, the State of Connecticut Department of Public Health (DPH) Asthma Program has established a statewide School-based Asthma Surveillance System (SBASS) based on the school Health Assessment Record (HAR). The Statute also requires the Asthma Program to report the results of this surveillance to the joint standing committees of the General Assembly every three years. This report summarizes the information collected during school years 2006-2007, 2007-2008 and 2008-2009.

## **Description of the School-based Asthma Surveillance System**

CGS §10-206 requires that public schools report to the DPH, on an annual basis, information on students with asthma. A student is considered as having asthma if he/she meets any of the following conditions: 1) has a provider's diagnosis of asthma indicated on the HAR, 2) has a provider medication order for asthma medication on file, 3) has an Asthma Action Plan (AAP) on file, 4) shows symptoms of asthma, 5) has a parental note on file indicating the child has asthma, or 6) any other indications that the child is suffering from asthma.

Information on students with asthma to be reported include: grade, age, sex, race, ethnicity, asthma severity, diagnostic source, and school. This information is only reported for students with asthma in grades requiring an HAR: Pre-Kindergarten (PK) or Kindergarten (K) for elementary schools, grade 6 or 7 for middle schools, and grade 9 or 10 or 11 for high schools (HAR requirement for high schools was changed to grade 9 or 10 from grade 10 or 11 at the beginning of the 2008-2009 school year). In order to facilitate this process, DPH and the State Department of Education (SDE) developed reporting forms for the school nurses to use (see Appendix 1). These forms are distributed to individual school nurses through the school district nurse supervisors. School district nurse supervisors collect completed forms in their school districts and submit the forms to the DPH by September for the previous school year. All data are entered into SBASS, a Microsoft Access database, by trained DPH staff. Data quality checks are then performed to ensure the accuracy and completeness of the data entered.

## **Methods for Asthma Rate Calculations**

School districts choose which grades require an HAR based on the options provided by the legislation. More specifically, it is up to the district to decide whether to require an HAR for students in grades PK or K, 6 or 7, and 9 or 10 or 11. School nurses are required to submit asthma data on the grades that require an HAR only, but some submit data on the other grades as well. Starting in school year 2006-2007, school district nurse supervisors were asked to report specifically which grades required an HAR in their districts.

Asthma rates are calculated by dividing the number of students with asthma by the total number of children enrolled in the required grades in the district. However, for some districts,

it was still unclear what grades to include in the rates calculation because the grades specified by the school district nurse supervisors as requiring an HAR may be different from the actual grades that were reported for students with asthma. For example, a district may have indicated that grade 6 was the required grade for asthma data to be submitted, and while some nurses within the district submitted asthma data for grade 6, others may have submitted asthma data for grade 7 instead. In other instances, the district may have indicated both grades 6 and 7 were the required grades for asthma data to be submitted, but only grade 6 asthma data was submitted. In these instances it is very difficult to decipher what grades in the district should be used in the calculation of asthma rates.

In light of these issues, the following steps were taken to calculate asthma rates for each district: 1) only public schools with enrollment data obtained from SDE were included in the rates calculation. Enrollment data from SDE were obtained through the Connecticut Education Data and Research portal ([http://sdeportal.ct.gov/Cedar/WEB/ct\\_report/CedarHome.aspx](http://sdeportal.ct.gov/Cedar/WEB/ct_report/CedarHome.aspx)), and nearly 97% of the reporting public schools had enrollment data obtained from SDE; and 2) in order to best determine which grades should be used for asthma rates calculation, the grades with the highest number of students reported as having asthma at the elementary, middle, and high school level for each school were included for rate calculations. Specifically, for each school, the grade with the highest number of students with asthma in grade PK or K was selected for elementary school rates calculation. The grade with the highest number of students with asthma in grade 5, 6, or 7 was selected for middle school rate calculations (some school districts reported grade 5). The grade with the highest number of students with asthma in grade 9, 10, or 11 was selected for high school rate calculations. For most schools, each school reported only one of the grades at the elementary (76%), middle (96%), and high school (96%) levels. This methodology ensured the appropriate grades for each school are used in rate calculations. For some schools that reported multiple grades for each school level of entry, it was hypothesized that the grades with the highest number of students reported as having asthma represented the more complete and accurate reporting than the other grades.

For all other information in this report that did not involve the use of enrollment data to calculate rates, analysis was performed based on grades requiring an HAR as reported by the school district nurse supervisors.

### **Comparison to Previous Report**

It should be noted that the methods for asthma rate calculations in this report were different when compared to the previous report: "Connecticut School-based Asthma Surveillance, School Years: 2004-2006" ([http://www.ct.gov/dph/lib/dph/hems/asthma/pdf/sbasr\\_2007.pdf](http://www.ct.gov/dph/lib/dph/hems/asthma/pdf/sbasr_2007.pdf)); therefore, any comparisons to the 2004-2006 report should be made with caution.

## Results

---

The number of school districts submitting asthma reports were 186 (96.9%), 186 (96.9%), and 185 (96.4%) for the school years 2006-2007, 2007-2008, and 2008-2009, respectively. For the purpose of this report, school districts included regional districts, magnet schools, charter schools, and regional education service centers. A total of 1,154 schools reported a total of 18,440 students with asthma for school year 2006-2007. A total of 1,168 schools reported a total of 18,637 students with asthma for school year 2007-2008. A total of 1,163 schools reported a total of 20,605 students with asthma for school year 2008-2009. For a listing of reporting schools for each school year, please refer to Appendix 2.

### **Asthma Prevalence Rates by Grade, Sex, and Race/Ethnicity (Figure 1)**

Information on asthma prevalence rates by grade, sex, and race/ethnicity can be found in Figure 1 and Appendix 3. Asthma prevalence rates among Connecticut public school students were 13.2% for school year 2006-2007, 13.2% for school year 2007-2008, and 13.1% for school year 2008-2009. Asthma prevalence rates were higher among students in grade PK or K when compared to the students in grades 6 or 7, and grade 9, 10, or 11. This difference was less apparent for school year 2008-2009, where the asthma rates were 14.4% among students in grade PK or K, 13.5% in grade 6 or 7, and 12.2% in grade 9, 10 or 11. Asthma prevalence rates were higher among male students when compared to female students. For school year 2008-2009, the asthma rates were 14.5% among male students and 11.6% among female students. In regard to asthma prevalence rates by race/ethnicity, Hispanic students had the highest rates of asthma followed by black students, other race/ethnicity students, and white students. For school year 2008-2009, the asthma rates were 16.9% among Hispanic students, 14.8% among black students, 12.2% among students of other race/ethnicity, and 10.6% among white students. Please note that about 8.8% of students were reported as having an unknown race/ethnicity category; therefore, asthma prevalence rates by race/ethnicity groups could potentially be underestimated.

### **Asthma Prevalence Rates by District Reference Groups (Figure 2)**

Information on asthma prevalence rates by District Reference Groups (DRG) can be found in Figure 2 and Appendix 4. DRG is a classification system established by the SDE in which districts that have public school students with similar socioeconomic status (SES) and need are grouped together. The 2006 DRG classifications are based on seven variables: income, parent's education, occupation (of student's parents), family structure, poverty, home language, and district enrollment. For more information regarding DRGs, please visit SDE website: [http://www.csde.state.ct.us/public/cedar/databulletins/db\\_drg\\_06\\_2006.pdf](http://www.csde.state.ct.us/public/cedar/databulletins/db_drg_06_2006.pdf). In general, SES decreases with each letter from A to I, and asthma rates increased with decreasing SES. Four of the five largest cities (Bridgeport, Hartford, New Haven, and Waterbury) belonged to group I, which had the highest asthma rates. For school year 2008-2009, the asthma rates ranged from 7.4% among students in DRG A to 19.2% among students in DRG I. It should be noted that

nearly a quarter (24.4%) of the students with asthma were attending schools in the lowest DRG (I) and nearly two out of five (38.1%) students with asthma were attending schools in the two lowest DRGs (H and I; data not shown). Tables containing asthma prevalence rates by DRG and race/ethnicity can be found in Appendix 5.

### **Students with Asthma by Grade and Sex (Figure 3)**

Information on students with asthma by grade and sex can be found in Figure 3 and Appendix 6. Males made up the majority of students with asthma in the PK/K, 6/7, and 9/10/11 grades. However, there were slightly more female students with asthma in grade 10/11 than male students with asthma in the private schools during school year 2006-2007. Students with unknown sex were not included.

### **Students with Asthma by Grade and Race/Ethnicity (Figure 4)**

Information on students with asthma by grade and race/ethnicity can be found in Figure 4 and Appendix 7. Whites made up the majority of students with asthma in both public and private schools. This is likely due to the fact that whites are the largest racial group in the schools. In public schools, Hispanics represented the second highest percentage of students with asthma for all school years in the grades presented. In private schools, blacks represented the second highest percentage of students with asthma among whites, blacks and Hispanics.

### **Students with Asthma by Grade and Severity (Figure 5)**

Information on students with asthma by grade and severity can be found in Figure 5 and Appendix 8. In public and private schools, the majority of asthma cases were reported as mild. In general, the percentage of students with exercise induced asthma increased as grade increased, and the percentage of students with moderate asthma decreased as grade increased.

### **Students with Asthma by Severity and Sex (Figure 6)**

Information on students with asthma by severity and sex can be found in Figure 6 and Appendix 9. Males consistently showed higher percentages of mild asthma while females showed higher percentages of exercise induced asthma. Percentages of severe asthma remained low for both males and females in public and private schools.

### **Students with Asthma by Race/Ethnicity and Severity (Figure 7)**

Information on students with asthma by race/ethnicity and severity can be found in Figure 7 and Appendix 10. In general, the percent of students with mild asthma was highest among whites for all schools and years, while the percent of students with moderate asthma was highest among blacks. Exercise induced asthma was more prevalent in white students than

blacks and Hispanics in both public and private schools. Percentages of students with severe asthma were low in all races, ranging from 0-2%.

### **Student Asthma Diagnoses Source by Race/Ethnicity (Figure 8)**

Information on students asthma diagnoses source by race/ethnicity can be found in Figure 8 and Appendix 11. Students were categorized as having asthma if they met any of the following criteria: had a provider's diagnosis of asthma indicated on the HAR, had a provider medication order for asthma medication on file, had an AAP on file, showed symptoms of asthma, had a parental note on file indicating the child has asthma, or, any other indications that the child is suffering from asthma. School nurses were asked to check all that apply. Diagnostic sources that are supposed to be submitted to the school from the doctor's office are presented below. About three out of every four students had an asthma diagnosis from the HAR; one out of every three students had asthma medication on file; and one out of every twenty students had an AAP on file. Among whites, blacks, and Hispanics in public and private schools, whites were slightly less likely to have the HAR as the source of their asthma diagnoses. HAR was the most likely source and AAP was the least likely source of an asthma diagnoses for all races in both public and private schools. Note: numbers indicate the percent of students who had any of the diagnostic sources and may not add up to 100%.

### **Asthma Information by School District**

Information on asthma prevalence rates by school district can be found in Appendix 12. Note that only certain schools and grades for the school district were used in rate calculations. Refer to Methods for Asthma Rate Calculations in the Introduction Section for more detail. Number of students with asthma by sex and school district can be found in Appendix 13. Number of students with asthma by race/ethnicity and school district can be found in Appendix 14.
