

Health Information Technology Exchange of Connecticut Technical Committee

The Technical Infrastructure Committee is responsible for making recommendations to the Committee on the statewide architecture, hardware, software, application, network configuration and other technological aspects that physically enable the technical services for HIE in a secure and appropriate manner. All recommendations to the Committee need to address the long-term (> 2 years) and the short-term (6 months - 2 years) goals to support the planning and implementing phases of the overall project. Short-term goals will identify the local and State-level requirements that can be achievable by the end of year 2 and long-term goals that will address interoperability with the NHIN.

Specifically, the Committee must include, but is not limited to, the following objectives:

- ❑ Establish mechanisms for ensuring and establishing interoperability with the NHIN
- ❑ Ensure adherence to HHS adopted standards and certifications
- ❑ Define and development the technical architecture and approach for the State HIE
