2015 State Housing Market: Permits Up, Prices Fall

By Kolie Sun, Senior Research Analyst, DECD

2015 was a strong year for the U.S. housing market, due to high home sales and rising home prices. Connecticut followed the nation in terms of sales, however, prices continued to fall. The multifamily unit segment became more important than ever in the state's housing industry as demand for multi-units is on the rise. In this annual article, we will examine several aspects of the state's housing sector and the factors leading to an increasing demand for rental units.

Housing Production

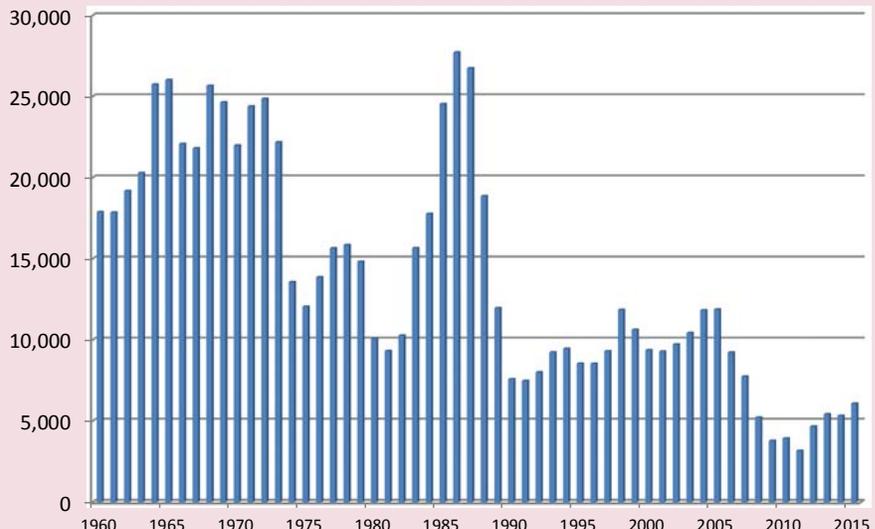

According to the recent Bureau of the Census release, cities and towns in Connecticut authorized a total of 6,077 single and multifamily homes in 2015. Although this level of production represents a 14.0% increase compared to 5,329 in 2014, it is still 21.5% below the pre-recession level of 7,746 in 2007 (see

chart 1).

Fairfield County, once again, dominated the number of housing permits with the largest share (42.8%) in 2015, followed by New Haven County (19.1%) and Hartford County (14.7%). Windham County had the smallest share (1.5%). Notably, the state's multifamily units (5 units or more) accounted for over half of the total number of housing units authorized, while 40.1% were single-family homes in 2015. Several municipalities showed strong performance in the multifamily unit category; Stamford led all municipalities with 639 units authorized, followed by Danbury with 551, Milford with 358, Norwalk with 350, and New Haven with 262. The combined permits issued for the top five municipalities accounted for 35.5% of all housing permits issued in the state.

2014	\$934	\$1,076	15.2%	36.9%	33.6%

Source: Census American Community Survey (ACS) 1-yr estimates

surveys each municipality for demolition information perennially. One hundred forty-five Connecticut towns responded (86% response rate), reporting 1,230 demolished units in 2015. As a result, the state’s net gain of 4,847 units brings its housing inventory estimates to 1,506,593 units.

Overall, the nation experienced a 13.0% increase in housing permit authorizations from 2014 to 2015. New York State experienced the largest percentage increase of permit activity, while North Dakota saw the largest decline during the same period. Connecticut fared better than the nation in terms of permit growth and ranked 19th in the country according to the Census Bureau.

Home Sales and Prices

In 2015, the state’s real estate market gained momentum in the number of sales but not prices. According to the Warren Group report, Connecticut single-family home sales picked up a 16.9% gain from 25,660 in 2014 to 29,986 in 2015, the strongest growth in more than a decade. Condominium sales also gained ground with a 13.3% increase from 6,961 in 2014 to 7,886 in 2015.

The stronger sales could not command higher prices, which exemplified the common saying: “In a typical housing recovery, sales pick up first, followed by prices.” From the same report, the median single-family home sales price fell 2.2% from \$251,500 in 2014 to \$246,000 in 2015. This marked the second consecutive year home median prices declined. Condominium prices also fell 3.3% during the same time period.

According to the Federal Housing

Finance Agency’s House Price Index (HPI),¹ the U.S. house prices advanced 5.8% from the fourth quarter of 2014 to the fourth quarter of 2015, while the state’s HPI increased at a mere 0.1%. The U.S. ranked 19th and Connecticut 50th.

Stagnating values and falling prices have other consequences. Mortgage delinquency occurs when a homeowner fails to make a mortgage payment. “The percent of delinquent mortgages in Connecticut is 0.1%. With U.S. home values having fallen by more than 20% nationally from their peak in 2007 until their trough in late 2011, many homeowners are now underwater on their mortgages, meaning they owe more than their home is worth. The percent of Connecticut homeowners underwater on their mortgage is 0.2%.”²

Rental Markets

In Connecticut, the number of renter-occupied housing units increased to 455,778 units in 2014 from 451,382 in 2013, although the percentage of renter-occupied housing units changed little at 33.6%, according to the 2014 American Community Survey,³ the most recent data available. In 2005, about 30.5% of state residents rented (See table 1).

The table also shows that the median gross rent for Connecticut increased to \$1,076 in 2014 from \$1,037 in 2013, although the rent peaked in 2008 at \$1,088. Connecticut’s median rent is consistently higher than the nation. This is one of the indicators showing that state residents bear higher housing costs than the nation.

The demand for apartments and condominiums continued to rise, as evidenced by the number of structures with 5 units or more authorized last year. In 2015, Connecticut issued 3,493 multifamily permits, the largest number since 1988. This level of permitting accounted for 57.5% of the total number of housing units authorized, the largest share in

Introducing the Job-to-Job Flows Data

By Patrick J. Flaherty, Assistant Director of Research, DOL, Patrick.Flaherty@ct.gov

This article introduces a new set of statistics about the dynamic nature of the labor market – the Job-to-Job Flows. These statistics provide information on workers who leave or lose one job and take another with little or no unemployment in between. For example, when a worker quits one job to take a better job at a different company, this will be counted as a job-to-job flow. While the data is still considered “Beta” and will be enhanced and improved in future years, the recently released numbers help us understand job changes in Connecticut.

The monthly reports of employment and unemployment are based on a measure of employment levels at a particular time. For example, in June the U.S. Department of Labor reported that the number of jobs in May increased by 38,000 from April and the unemployment rate declined 0.3% to 4.7%. The jobs numbers are based on a survey of employers who are asked to report the number of workers on their payrolls in the month during a certain week. Similarly, the unemployment rate is based on a survey of households – individuals

are asked whether they are working or not and if not, whether they are looking for work during a particular week of the month. While these monthly snapshots provide important information, the labor market is much more dynamic than the net changes show. We know from a separate report¹ that while the net change was 38,000 jobs, approximately 5 million workers were hired into new jobs that month (and approximately 5 million workers lost or left their jobs that month). We also know that thousands of jobs were added at companies that expanded and new companies that opened just as other jobs were being lost at companies that contracted or closed.²

In addition to these statistics we now have the Job-to-Job flows³ to help us get a fuller picture of the dynamics of the labor market. The rest of this article will explore some aspects of what the Job-to-Job flows can tell us about the Connecticut labor market.

The number of people changing jobs has increased since the end of the recession. In general, this should be considered good news because changing jobs is often the best way for some workers to advance their careers. In 2010, there were fewer than 45,000 workers per quarter who left one job and took another. By 2014 (latest year for which we have data), that number approached 60,000 and the trend continued to be up.⁴ (Chart 1)

Workers may change industries in order to move into a better position. For example, there are significantly more people who found a job in manufacturing who had previously worked in a different industry than left manufacturing jobs for other industries (Chart 2). On the other hand, more people left retail for jobs in other industries than came into retail from other industries. There has been a clear trend in retail: in 2010, approximately 1,000 more workers per quarter left retail for jobs in other industries than came into

Chart 1: Connecticut Job to Job Flows

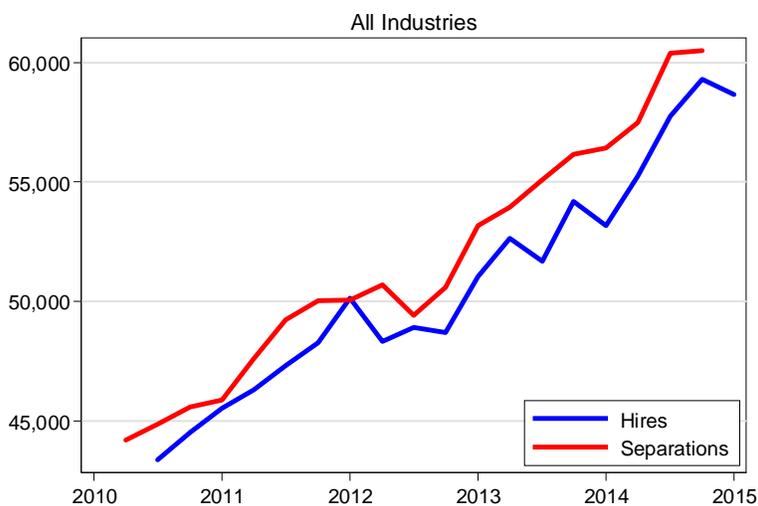

Chart 2: Connecticut Job to Job Flows

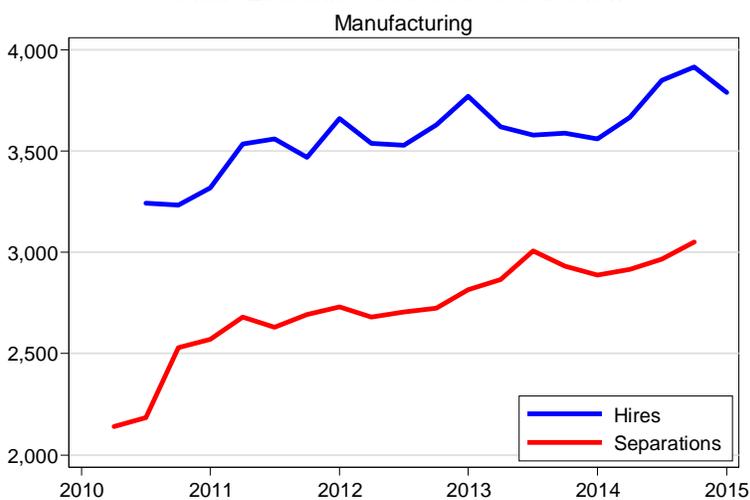

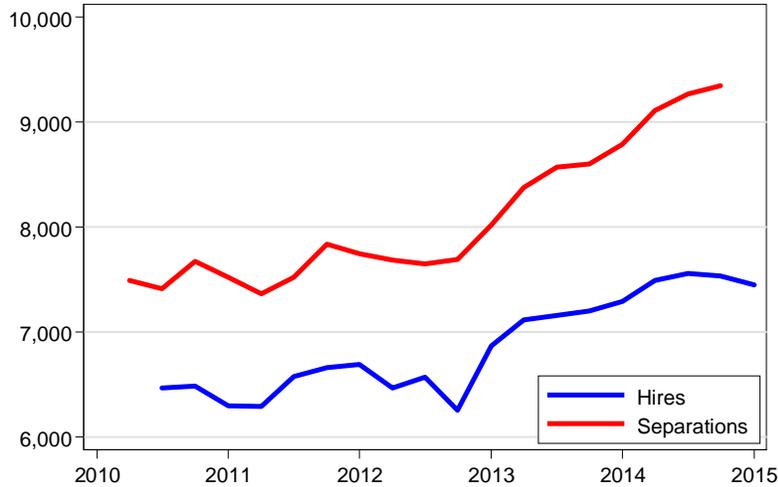

Chart 3: Connecticut Job to Job Flows
Retail Trade

Texas than came to Connecticut from jobs in those states.

Finally, the Job-to-Job Flows statistics contain demographic information (Chart 4). For example, we can look at the age breakdown of the workers who are coming to Connecticut for jobs and who are leaving Connecticut for jobs in other states. Not surprisingly, the greatest number of those moving are workers in their 20's and early 30's; however, moving across state lines for a new job can take place at any age. Interestingly, significantly more workers in the 35-44 age range left jobs in New York for jobs in Connecticut than did the reverse. Importantly, for every age group the flows are large in both directions.

While more workers in their early 20's left Connecticut for jobs in Massachusetts than the reverse, the net is quite small (25 workers per quarter) compared to the flow (approximately 250 workers per quarter in either direction).

Net changes in labor statistics such as total employment and the unemployment rate receive the most media attention. However, to fully understand the labor markets one must examine the underlying dynamics. Fortunately, the tools to conduct this analysis are being developed and improved. The Job-to-Job Flows, recently released by the U.S. Census in partnership with the Bureau of Labor Statistics and state labor departments, is one important example. ■

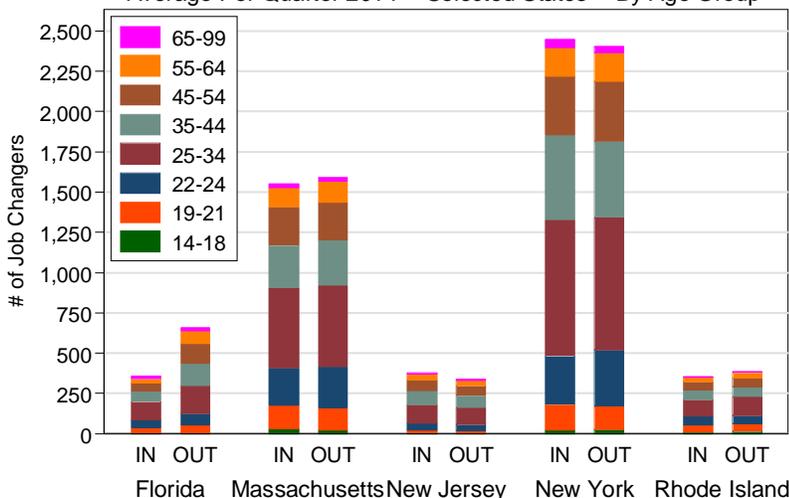

retail from other industries. By 2014, that number had nearly doubled to 1,800 per quarter (Chart 3).

The Job-to-Job Flows data allows us to track job changes between states. Thousands of people per quarter leave jobs in other states to take jobs in Connecticut and thousands of workers leave jobs in Connecticut to take jobs elsewhere. As Table 1 shows, more people left jobs in New York and New Jersey for jobs in Connecticut than left jobs in Connecticut for jobs in those states. However, more people left Connecticut for jobs in Florida, California, North Carolina, and

Table 1. Job to Job Flows Between Connecticut and Other States, Average Per Quarter 2014

4 How to interpret the charts: Job-to-Job means the worker left one job and started another so a worker who left a job in Connecticut and started a new job in Connecticut would be on both lines. The reason for the gap is that more people left jobs in Connecticut for jobs in other states than took jobs in Connecticut having left jobs in other states. This is discussed in more detail later in the article.

-continued from page 2-

several decades. At the national level, only five regions, including Connecticut, along with the District of Columbia, New York, New Jersey, and Massachusetts, authorized more than half of the total number of housing units in the multifamily category last year.

A new wave of rental housing with extra amenities is becoming more attractive to certain demographic groups, such as baby boomers and millennials. An increasing number of older Americans are becoming renters. The millennials, the largest segment of the population, changed the economic landscape with their lifestyles, spending patterns, and consuming behaviors. This group also delays marriage and family formation, and prefers renting than owning. For this reason, the demand for rental housing is increasing. As reported by the Joint Center for Housing Studies of Harvard University, for the U.S. as a whole, 37% of all households rent—the highest level since the mid-1960s.

Housing Affordability

Housing affordability is generally defined as paying no more than 30% of household income for housing costs, including mortgages, property taxes and insurance. Based on the 2010-2014 American Community Survey 5-year estimates, nearly 40% of the state's households with a mortgage spend more than 30% of their household income on housing costs. According to a report by the Partnership for Strong Communities in 2015, 50% of renters pay more

than 30% of their income on housing.⁴

According to a National Low Income Housing Coalition report in 2015, the Fair Market Rent (FMR) for a two-bedroom apartment is \$1,263. In order to afford this level of rent and utilities – without paying more than 30 percent of income on housing – a household must earn \$4,210 monthly, or \$50,515 annually. Assuming a 40-hour workweek, 52 weeks per year, that level of income translates into a “Housing Wage” of \$24.29 per hour, the eighth highest in the nation. By way of example, a household would need 2.9 full-time minimum wage earners to make the two-bedroom FMR affordable.⁵

In 2015, Connecticut became the first state to end chronic homelessness among veterans,⁶ a major step toward ending all homelessness among veterans. The Partnership for Strong Communities also noted progress, saying: “The unprecedented support for affordable housing creation provided by Gov. Malloy and the General Assembly has resulted in thousands of new affordable units...including affordable units into market rate developments furthers economic integration and capitalizes on market demands for multi-family housing, the highest since 1987.”⁷

Conclusion

In 2015, Connecticut's housing market continued on the road to

recovery with strong permit growth, and a double-digit gain in home sales. Early data suggests that the growth is likely to continue this year. The state's residential permits through April 2016 rose nearly 18%,⁸ and year-to-date (Q1 2016) home sales was up 25.6%⁹ when compared to the same period a year ago, respectively.

According to the National Association of Realtors Chief Economist, Lawrence Yun: “Following the housing market's best year (2015) in nearly a decade, existing-home sales are forecasted to expand in 2016 at a more moderate pace as pent-up buyer demand combats affordability pressures and meager economic growth.”¹⁰ ■

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 1996 = 100.

The **Farmington Bank Business Barometer** is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

Total nonfarm
employment increased

HELP WANTED ONLINE

CT Online Labor Demand Fell 2,600 in May

The Conference Board's Help Wanted OnLine (HWOL) data reported that there were 58,900 advertisements for Connecticut-based jobs in May 2016, a 4.2 percent decrease over the month and a 26.5 percent decrease over the year. There were 3.10 advertised vacancies for every 100 persons in Connecticut's labor force, while nationally it was 3.07 percent. Among the New England states, Massachusetts had the highest labor demand rate (4.16), while Rhode Island had the lowest rate (2.75).

	May	May	Apr
(Seasonally adjusted)	2016	2015	2016
CT Vacancies (000s)	58.9	80.1	61.5
Hartford Vac. (000s)	23.8	32.2	24.6
Labor Demand Rate *			
Connecticut	3.10	4.23	3.23
United States	3.07	3.45	3.25
Maine	2.98	4.69	3.03
Massachusetts	4.16	4.79	4.28
New Hampshire	3.18	3.72	3.41
Rhode Island	2.75	4.07	2.84
Vermont	2.97	4.09	3.10

* A percent of advertised vacancies per 100 persons in labor force
Source: The Conference Board

The Conference Board Help Wanted OnLine® Data Series (HWOL) measures the number of new, first-time online jobs and jobs reposted from the previous month for over 16,000 Internet job boards, corporate boards and smaller job sites that serve niche markets and smaller geographic areas. Background information and technical notes and discussion of revisions to the series are available at: www.conference-board.org/data/helpwantedonline.cfm.

NOTE: More industry detail data is available for the State and its nine labor market areas at: <http://www.ctdol.state.ct.us/lmi/202/covered.htm>. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

* State-designated Non-CES areas

For further information on these nonfarm employment estimates contact Lincoln Dyer at (860) 263-6292.

BUSINESS AND EMPLOYMENT CHANGES ANNOUNCED IN THE NEWS MEDIA

- In May 2016, Cirus Energy of Norwalk announced it will expand by 225 jobs over the next four years. Bridgewater Associates plans to add 750 jobs over the next six years at its location in Westport.
- In May 2016, the City of Hartford cut 40 jobs. NRG Home Solar of Middletown announced it will close, affecting 46 workers. RBS Securities of Stamford continues to eliminate jobs with the latest cut of 30 employees scheduled for July. The show "Who Wants to Be a Millionaire" will move from Stamford to Las Vegas, bringing with it 150 jobs. Citigroup of Hartford plans to transfer 150 positions from Hartford to Tampa, FL over the next three years. Ivory Ella, an online retailer, will be moving its 40 workers from Groton to Westerly, RI.

Business & Employment Changes Announced in the News Media lists start-ups, expansions, staff reductions, and layoffs reported by the media, both current and future. The report provides company name, the number of workers involved, date of the action, the principal product or service of the company, a brief synopsis of the action, and the source and date of the media article. This publication is available in both HTML and PDF formats at the Connecticut Department of Labor Web site, <http://www.ctdol.state.ct.us/lmi/busemp.htm>.

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The **unemployment rate** represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

BUSINESS STARTS AND TERMINATIONS

Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved time-series models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
