

## UConn Broadband Survey

As the CTGIG project starts to gain momentum, the Connecticut municipalities are studying the options to increase access to high speed internet to their communities. UConn, with the help of the Connecticut Technology Council, the CTGIG project, and the Office of Consumer Counsel, is conducting a survey on residential and business internet speed, usage, and price. The information that we gather from these surveys will help us better understand the landscape of internet access, usage, and price at a localized level in Connecticut.
