Request for Proposal for Services

RFP #SERC0809-1

The Connecticut Department of Environmental Protection, State Emergency Response Commission (SERC) is seeking proposals from individuals, firms or corporations to conduct a hazardous material (HM) transportation commodity flow study, refer to as "Study". The Study is to identify the types and amounts of HM commodities transported through a geographic area and the routes used for transporting these commodities. The Study must include a commodity flow survey to learn more about the types and quantities of hazardous materials transported and patterns of hazardous materials movement in the state. The Contractor will be expected to perform an analysis of the data collected as a result from survey and provide a formal presentation of findings to the SERC.

It is anticipated that the funding for this project will be provided by the U.S. Department of Transportation Hazardous Material Emergency Preparedness Grant within the projected budget of \$33,000. The SERC wishes to secure the services of an experienced contractor capable of performing a Study that identifies the types and volume of HM transported in, across or through the State of CT in a timely and cost-effective manner.

The request for proposal and proposal terms and conditions are available online at <http://www.ct.gov/serc> or from Kelly McShea, 860-424-3373.
