PHARMACIST EVALUATIONS

Date / Conditions	Comments / Recommendations
<p>07/03/2009 (Appointment)</p> <ul style="list-style-type: none">- Allergic rhinitis or seasonal allergies- Asthma- Depressive Disorder- Diabetes Type I- Epilepsy (seizures)- Nutritional deficiencies requiring supplements- Sleep disorder	<p>Dr. Example:</p> <p>I spoke with Michelle (05/20/1941) as part of Michelle's participation in the CT Medicaid Medication Therapy Management (MTM) program. This service is provided under the patient's health plan. The goal of MTM is to help patients get the most out of their drug therapy. By working with patients and their providers directly, I make sure their medications are indicated, effective, safe and convenient for them. A care plan is then developed for each patient, and follow-up evaluation is done to ensure that medication outcomes are being achieved. Please note, I do not have authority to prescribe or change medication without physician approval.</p> <p>In talking with Michelle, I found opportunities that may improve medication outcomes, and possibly save health care costs.</p> <p>1) Drug interaction between Dilantin and Prozac: Michelle complains of headaches and nausea that are getting worse. She also has diplopia on exam. As noted in our phone call recommended drawing a phenytoin level and changing from Prozac to Celexa.</p> <p>2) Doesn't understand Advair doses: Michelle had been out of Advair for approximately 2 months. Discovered that there was no active medication in her inhaler. Educated her on how to look for how many doses are left.</p> <p>I have also given a copy to Michelle and recommended to discuss these items at your next visit. Please call with any questions regarding Michelle's medication therapy.</p> <p>I can be reached at (952) 746-8185.</p> <p>Sincerely,</p> <p>Victoria Losinski, PharmD</p> <p>Certified Pharmaceutical Care Practitioner</p> <p><i>Medication Management Systems, RPH</i></p>
